

XRCF Phase 1 Testing:  
Analysis Results

Smithsonian Astrophysical Observatory

May 10, 2004

# Contents

<b>1</b>	<b>Introduction</b>	
1.1	The Facility and Experimental Setup . . . . .	1 – 1
1.2	The Measurements . . . . .	1 – 3
<b>2</b>	<b>Summary</b>	
<b>3</b>	<b>The HXDS Flow Proportional Counters</b>	
3.1	Introduction . . . . .	3 – 1
3.1.1	Calibration Overview . . . . .	3 – 1
3.2	Apertures . . . . .	3 – 1
3.2.1	Focal Plane Apertures . . . . .	3 – 1
3.2.2	BND Apertures . . . . .	3 – 5
3.3	Spectral Response Function . . . . .	3 – 7
3.4	Gain Nonuniformity and Anode Aging . . . . .	3 – 12
3.5	Quantum Efficiency . . . . .	3 – 15
3.5.1	Monochromator Results . . . . .	3 – 16
3.5.2	Absolute Broad Band . . . . .	3 – 26
3.5.3	Relative QE <sub>s</sub> from Flat Field Calibration . . . . .	3 – 28
3.5.4	Relating Flat Field, HRMA, and BESSY measurements . . . . .	3 – 31
3.5.5	Final Results: Standardized FPC QE <sub>s</sub> . . . . .	3 – 34
3.6	Future Work . . . . .	3 – 37
<b>4</b>	<b>The HXDS Solid State Detectors</b>	
4.1	Introduction . . . . .	4 – 1
4.2	Calibration Overview . . . . .	4 – 1
4.3	Spectral Response Function, SRF . . . . .	4 – 2
4.3.1	Components of the Response Function . . . . .	4 – 2
4.3.2	Interpeak Pileup . . . . .	4 – 5
4.4	Results of Fitting Response Function Spectra . . . . .	4 – 7
4.5	Detector Efficiency vs. Energy Narrow Band . . . . .	4 – 20
4.6	Q. E. Broad Band: White light Calibration . . . . .	4 – 25
4.6.1	The algorithm for calculating the synchrotron radiation spectrum . . . . .	4 – 25
4.6.2	The SYNCH Model . . . . .	4 – 39
4.6.3	Synchrotron Measurement Procedures . . . . .	4 – 39
4.6.4	Results of the Fitting . . . . .	4 – 41

## CONTENTS

4.6.5	Icing . . . . .	4 – 63
4.6.6	Detector Uniformity . . . . .	4 – 63
4.7	Future Work . . . . .	4 – 63
<b>5</b>	<b>Deadtime and Pileup Correction in the HXDS FPCs and SSDs</b>	
5.1	Introduction . . . . .	5 – 1
5.2	Deadtime and Pileup Time Windows . . . . .	5 – 2
5.3	Calibration Measurements . . . . .	5 – 3
5.4	Deadtime consistency testing . . . . .	5 – 3
5.4.1	Experimental configuration . . . . .	5 – 3
5.4.2	Data reduction . . . . .	5 – 4
5.4.3	Correction equations . . . . .	5 – 5
5.4.4	Results . . . . .	5 – 8
5.4.5	Simplified and More General Method for Deadtime Determination . . . . .	5 – 8
5.4.6	Estimated accuracy in analysis of AXAF calibration data . . . . .	5 – 9
5.5	Recommendations . . . . .	5 – 10
5.6	Appendices . . . . .	5 – 11
<b>6</b>	<b>FPC Window Mesh Effect and its Correction</b>	
6.1	Introduction . . . . .	6 – 1
6.2	HRMA Image on FPC Mesh . . . . .	6 – 2
6.3	Mesh Transmission Model . . . . .	6 – 2
6.4	Mesh Scan . . . . .	6 – 2
6.5	Mesh Correction . . . . .	6 – 3
6.6	Conclusion . . . . .	6 – 4
<b>7</b>	<b>High Speed Imager Calibration</b>	
7.1	Introduction . . . . .	7 – 1
7.2	Calibration Data Summary . . . . .	7 – 1
7.3	HSI Quantum Efficiency Measurements . . . . .	7 – 2
7.4	Count Rate Linearity . . . . .	7 – 2
7.5	Flat Fields . . . . .	7 – 10
7.6	Spatial Distortion . . . . .	7 – 20
7.7	Ion Shield Transmission . . . . .	7 – 22
<b>8</b>	<b>HXDS Translation Stages and Related Calculations</b>	
8.1	Introduction . . . . .	8 – 1
8.2	Hardware Description: Focal Plane Stack . . . . .	8 – 1
8.3	Hardware Description: BND . . . . .	8 – 2
8.4	Hardware Description: Apertures for SSD and BND Detectors . . . . .	8 – 2
8.5	Stage Log File Formats . . . . .	8 – 3
8.6	Computations with the Stage Log information: fpc.x Detectors . . . . .	8 – 3
8.7	Computations with the Stage Log information: Other Detectors . . . . .	8 – 5
8.8	Known Shortcomings of this Method . . . . .	8 – 5

<b>9 Spectral Fitting in HXDS Detector Data Analysis</b>	
9.1 Introduction . . . . .	9 – 1
9.2 Reduction of the Line Measurements . . . . .	9 – 1
9.3 A Sample Fit: Ti K- $\alpha$ . . . . .	9 – 4
9.4 A Higher Fidelity Method for Analysis of FPC Line Data . . . . .	9 – 5
9.5 Analysis of BESSY FPC Monochromator data . . . . .	9 – 8
<b>10 Simulations</b>	
10.1 Introduction . . . . .	10 – 1
10.2 HRMA Model . . . . .	10 – 1
10.2.1 Optics' Figure . . . . .	10 – 1
10.2.2 Baffles and Support Structure . . . . .	10 – 3
10.2.3 Mirror Surface . . . . .	10 – 3
<b>11 HRMA Effective Area: SSD C-continuum Measurements</b>	
11.1 Introduction . . . . .	11 – 1
11.2 SSD C-continuum Effective Area Measurements . . . . .	11 – 2
11.3 Pileup Correction . . . . .	11 – 2
11.4 SSD Flat Field Test . . . . .	11 – 22
11.5 SSD Energy Scale . . . . .	11 – 22
11.6 SSD Deadtime Correction . . . . .	11 – 27
11.7 Beam Uniformity Test . . . . .	11 – 34
11.8 SSD Relative Quantum Efficiency . . . . .	11 – 34
11.9 SSD Icing Effect . . . . .	11 – 39
11.10 Background . . . . .	11 – 42
11.11 Data Analysis and Reduction . . . . .	11 – 42
11.12 Effective Area . . . . .	11 – 42
11.13 Error Analysis . . . . .	11 – 49
11.14 Comparing Measurements with the Raytrace Prediction . . . . .	11 – 49
11.15 Calibrating the HRMA Effective Area . . . . .	11 – 54
11.16 HRMA Effective Area Raytrace Predictions . . . . .	11 – 56
11.17 XRCF HRMA Effective Area . . . . .	11 – 67
11.18 On-orbit HRMA Effective Area Prediction . . . . .	11 – 77
11.19 Conclusion . . . . .	11 – 87
<b>12 HRMA Effective Area: Spectral Line Measurements</b>	
12.1 Introduction . . . . .	12 – 1
12.2 FPC Data Reduction . . . . .	12 – 1
12.3 Gain Nonuniformity in the open BND-H detectors . . . . .	12 – 2
12.4 FPC Beam Uniformity (BU) effects . . . . .	12 – 3
12.5 Relative Quantum Efficiencies (RQE) of the FPC detectors . . . . .	12 – 3
12.6 Corrected HRMA Entrance Flux: FPC detectors . . . . .	12 – 4
12.7 Effective Areas: FPC detectors . . . . .	12 – 5
12.8 Error Analysis: FPC detectors . . . . .	12 – 5
12.9 SSD Data Analysis . . . . .	12 – 10
12.10 Monochromator/FPC Effective Area Measurements . . . . .	12 – 11

<b>13 Fitting the HRMA Effective Area</b>	
13.1 Introduction . . . . .	13 – 1
13.2 Mirror Model . . . . .	13 – 1
13.3 Setup . . . . .	13 – 2
13.4 Fitting . . . . .	13 – 3
13.5 Resulting Fits . . . . .	13 – 35
<b>14 Wing Scans: Data Reduction and Pinhole Effective Areas</b>	
14.1 Pinhole Effective Areas . . . . .	14 – 4
14.1.1 X-ray data reduction . . . . .	14 – 4
14.1.2 Raytrace simulations of the pinhole experiments . . . . .	14 – 5
14.2 The Experiment as Performed . . . . .	14 – 5
14.2.1 History of the Pitch Problem . . . . .	14 – 6
14.2.2 Yaw Reference Error . . . . .	14 – 8
14.2.3 Vignetting by Quadrant Shutters . . . . .	14 – 8
14.3 Pinhole Effective Areas: X-ray data vs Raytrace . . . . .	14 – 8
14.3.1 Single Quadrant Wing Scan Pinhole Data . . . . .	14 – 9
14.3.2 Transverse (out of plane) Wing Scan Pinhole Data . . . . .	14 – 55
14.3.3 Double Quadrant Wing Scan Pinhole Data . . . . .	14 – 58
14.4 Discussion and Outstanding Issues . . . . .	14 – 61
14.5 Raytrace and Data Reduction Versions . . . . .	14 – 61
<b>15 Wing Scans: Analysis</b>	
15.1 PSD based on HDOS metrology . . . . .	15 – 1
15.2 Surface Brightness Profiles . . . . .	15 – 2
15.2.1 Shell 1 scans . . . . .	15 – 6
15.2.2 Shell 3 scans . . . . .	15 – 15
15.2.3 Shell 4 scans . . . . .	15 – 27
15.2.4 Shell 6 scans . . . . .	15 – 40
15.2.5 Double Quadrant Scans . . . . .	15 – 57
15.3 Out-of-Plane Scattering . . . . .	15 – 57
15.4 Comparison with Encircled Energy Data . . . . .	15 – 58
15.5 “2W <sub>1</sub> ” Profiles . . . . .	15 – 59
15.5.1 Shell 1 scans . . . . .	15 – 62
15.5.2 Shell 3 scans . . . . .	15 – 67
15.5.3 Shell 4 scans . . . . .	15 – 72
15.5.4 Shell 6 scans . . . . .	15 – 77
15.5.5 2 Quadrant Scans . . . . .	15 – 82
15.6 Outstanding Analysis Issues . . . . .	15 – 84
15.7 Implications for Scattering Models . . . . .	15 – 84
<b>16 Encircled Energy</b>	
16.1 Comparison of Encircled Energy Measurements to Simulations . . . . .	16 – 2
<b>17 Off Axis Effective Area</b>	

<b>18 HRMA Ring Focus Measurements</b>	
18.1 Introduction . . . . .	18 – 1
18.2 Measurements and Data . . . . .	18 – 2
18.3 Data Analysis . . . . .	18 – 3
18.4 Results . . . . .	18 – 4
18.5 Ring Focus Models . . . . .	18 – 4
18.6 Comparison of Data with the Model . . . . .	18 – 7
18.7 Conclusion . . . . .	18 – 8
<b>19 HRMA PSF</b>	
<b>20 HRMA Ghost Image Properties</b>	
20.1 Ghost Images – Geometry . . . . .	20 – 1
20.2 Ghost Baffle Design . . . . .	20 – 3
20.2.1 Control of Single Reflection Ghosts . . . . .	20 – 5
20.3 HSI Images of Ghosts . . . . .	20 – 6
20.4 Determination of Off-axis Angle Using Ghosts . . . . .	20 – 7
<b>21 Analysis of the “Mesh-Plane” HSI Image</b>	
21.1 Mesh-Plane HSI Image . . . . .	21 – 1
21.2 Raytrace Simulations . . . . .	21 – 2
21.3 Analysis of the Image . . . . .	21 – 3
21.3.1 Axial position of the image . . . . .	21 – 4
21.4 Updating the Tilts . . . . .	21 – 4
21.5 Mirror Distortions . . . . .	21 – 5
<b>22 Off-Axis imaging: comparing HSI images to raytrace models</b>	
22.1 Off-axis HSI Images (Full HRMA) . . . . .	22 – 1
22.2 Off-axis HSI Images (Single Shell) . . . . .	22 – 13
<b>23 Predictions of the On-orbit Performance</b>	
<b>24 EIPS Beam Uniformity</b>	
24.1 Beam Uniformity Tests . . . . .	24 – 1
24.2 Beam Uniformity Analysis . . . . .	24 – 2
24.3 Future Directions . . . . .	24 – 9
24.4 Acknowledgments . . . . .	24 – 10
<b>25 HRMA Ring Focus Shutter Test</b>	
25.1 Introduction . . . . .	25 – 1
25.2 Measurements . . . . .	25 – 1
25.3 Data Analysis . . . . .	25 – 1
25.4 Results . . . . .	25 – 2
25.5 Conclusion . . . . .	25 – 3
<b>26 HRMA Focus Measurements and Raytrace Update</b>	
26.1 HRMA Focus Measurements at XRCF . . . . .	26 – 1
26.2 Update of SAO HRMA Raytrace Model from XRCF Focus Data . . . . .	26 – 4
26.3 Updated deformation and sum files . . . . .	26 – 10

<b>27 Rigid-Body Misalignment Parameters</b>	
27.1 HATS Data . . . . .	27 – 1
27.1.1 November 1996 HATS ATP (Augmented) Data Set . . . . .	27 – 3
27.1.2 Conversion of HATS data to Rigid Body Coefficients . . . . .	27 – 5
27.2 Construction of the Mirror Rigid-Body Database . . . . .	27 – 5
27.3 Future Directions . . . . .	27 – 8
<b>28 HRMA Tilts at XRCF</b>	
28.1 Coordinate Systems and tilt angles . . . . .	28 – 1
28.2 Tilt Measurements . . . . .	28 – 3
28.3 Comparison with models . . . . .	28 – 4
28.4 Future work . . . . .	28 – 4
28.5 Quad shutter tilt data from XRCF tests . . . . .	28 – 5
28.5.1 Shell 1 . . . . .	28 – 5
28.5.2 Shell 3 . . . . .	28 – 6
28.5.3 Shell 4 . . . . .	28 – 7
28.5.4 Shell 6 . . . . .	28 – 8
<b>29 HRMA Off-Axis Focal Positions</b>	
<b>30 Internal Tilt-Compensated Coma-Free Decenter of the AXAF mirrors</b>	
30.1 Quadrant Shutter Flux Balance . . . . .	30 – 1
30.2 Off-Axis X-ray Images . . . . .	30 – 2
30.3 Morphology of the Off-axis X-ray Images . . . . .	30 – 2
30.3.1 Off-Axis Images: Large Lobes . . . . .	30 – 6
30.3.2 Off-Axis Images: Pincushion Caustics . . . . .	30 – 7
30.4 Measuring the Tilt-Compensated Decenter . . . . .	30 – 10
30.5 Future Directions . . . . .	30 – 16
<b>A Incidental Data Tables</b>	
A.1 Introduction . . . . .	A – 1
<b>B Coordinate Systems</b>	
<b>C Quadrant Shutter Nomenclature</b>	
<b>D Appendix: HRMA Pointing at XRCF</b>	
D.1 Introduction . . . . .	D – 1
D.2 Sources of Information . . . . .	D – 2
D.2.1 Test Order and Times . . . . .	D – 2
D.2.2 Actuator Encoder Readouts . . . . .	D – 2
D.3 Initial Actuator Position (IAP) . . . . .	D – 3
D.4 Actuator Failures . . . . .	D – 3
D.5 Data Processing . . . . .	D – 5
D.6 Discrepant Tests . . . . .	D – 6
D.6.1 Phase 1 . . . . .	D – 6
D.6.2 Phase 2 . . . . .	D – 6
D.7 The Pitch Problem and its Effect on Wing Scan Data . . . . .	D – 7
D.7.1 History of the Pitch Problem . . . . .	D – 7

D.7.2 Yaw Reference Error . . . . .	D – 9
-------------------------------------	-------

**E HRMA Dimensional Data**

E.1 HRMA Axial Datum Locations . . . . .	E – 1
E.1.1 HRMA Baffle Plates . . . . .	E – 4
E.1.2 P6 Ghost Baffle . . . . .	E – 4
E.1.3 HRMA Structure Assembly (HSA) . . . . .	E – 4
E.1.4 Forward HRMA Structure (FHS) . . . . .	E – 4
E.1.5 Thermal Precollimator . . . . .	E – 7
E.1.6 Aft HRMA Structure (AHS) . . . . .	E – 7
E.2 HRMA Mirror Spacing . . . . .	E – 10
E.3 HRMA Baffles and Obstructions . . . . .	E – 16
E.3.1 Thermal Precollimator and Forward HRMA Structure Baffles . . . . .	E – 18
E.3.2 Aft HRMA Structure Baffles . . . . .	E – 20
E.3.3 CAP Ghost Baffles . . . . .	E – 22
E.3.4 P6 Ghost Baffle . . . . .	E – 22
E.3.5 Fiducial Transfer System Periscope . . . . .	E – 22
E.4 Relation between HDOS and Raytrace Coordinates . . . . .	E – 24
E.5 HRMA Optic Prescription . . . . .	E – 26
E.6 HRMA Optic Clocking Angles . . . . .	E – 26

# List of Figures

1.1	Schematic of XRCF . . . . .	1 – 2
1.2	On-Axis Encircled Energy/Effective Area Measurements . . . . .	1 – 5
1.3	Wing Scan Measurements . . . . .	1 – 6
1.4	Mirror Ends Measurements . . . . .	1 – 7
1.5	2D Pinhole Scan Measurements . . . . .	1 – 7
1.6	PSF Outer Core Measurements . . . . .	1 – 8
1.7	HSI Image Measurements . . . . .	1 – 9
3.1	Relative size of 36-mm fpc_hn aperture . . . . .	3 – 8
3.2	Example spectra from BESSY SX700 monochromator . . . . .	3 – 9
3.3	BESSY KMC spectra—scan across Ar-K edge . . . . .	3 – 10
3.4	BESSY SX700 spectra—scan across Ar-L edge . . . . .	3 – 10
3.5	Ar-K edge work function . . . . .	3 – 11
3.6	Ar-L edge work function . . . . .	3 – 11
3.7	Counting rate linearity spectra . . . . .	3 – 13
3.8	Gain nonuniformity . . . . .	3 – 14
3.9	Model FPC QE . . . . .	3 – 16
3.10	Absolute QE for fpc_hn and fpc_x2 . . . . .	3 – 17
3.11	Relative QE for fpc_x2 from BESSY and XRCF . . . . .	3 – 19
3.12	Measured window transmissions . . . . .	3 – 20
3.13	QE vs. window transmission for fpc_x2 . . . . .	3 – 21
3.14	QE mapping of fpc_hn and fpc_x2 . . . . .	3 – 22
3.15	Measured window deflections . . . . .	3 – 23
3.16	Small-scale 2D QE mapping . . . . .	3 – 24
3.17	1D QE mapping scans of fpc_hn . . . . .	3 – 25
3.18	fpc_x2 QE at Ar-K edge . . . . .	3 – 26
3.19	White beam spectra . . . . .	3 – 27
3.20	Fitted absolute QE for fpc_hn and fpc_x2 . . . . .	3 – 39
3.21	Fitted absolute QE for fpc_ht and fpc_hb . . . . .	3 – 40
3.22	Fitted absolute QE for fpc_hs . . . . .	3 – 41
3.23	Fitted absolute QE for fpc_5 . . . . .	3 – 41
4.1	Components of the HYPERMET function. . . . .	4 – 3
4.2	Response functions of ssd_5 on both sides of the Ge L <sub>III</sub> edge. . . . .	4 – 5
4.3	Response functions of ssd_x and ssd_5 at 4.1 keV. . . . .	4 – 6

4.4	The pulse-height spectrum of radiation from an Fe target excited by a $^{244}Cm$ $\alpha$ -emitter. . . . .	4 – 13
4.5	The difference between the monochromator energy setting and the fitted energy. . . . .	4 – 15
4.6	Fitted low-energy (rising) tail parameters for ssd_5 and ssd_x. The upper panel shows the tail norm (counts in the tail), plotted as a fraction of the total number of counts in the main peak. The lower panel shows the corresponding values of the slope parameter. . . . .	4 – 17
4.7	Fitted shelf norm (counts in the shelf) for ssd_5 and ssd_x, plotted as a fraction of the total number of counts in the main peak. . . . .	4 – 18
4.8	Fitted escape and fluorescent line norms for ssd_5 (upper panel) and ssd_x (lower panel), plotted as a fraction of the total number of counts. . . . .	4 – 19
4.9	Reduced chi-squared $\chi^2$ values for the fitted regions of the spectra. . . . .	4 – 20
4.10	Measured QE data from SX700 data and their corresponding fitted curves for ssd_5 and ssd_x. The upper panel emphasizes the Al-K edge fine structure, and the lower panel provides a detailed view of the QE near the O-K edge. . . . .	4 – 22
4.11	The fitted QE curves extended to 10 keV. The upper plot shows the QE curve for ssd5 approaching a value of one at higher energies. The lower plot shows the ratio of QEs as a function of energy. . . . .	4 – 26
4.12	ssd_x Synchrotron White Light Spectra . . . . .	4 – 40
4.13	Data and XSPEC fit at the white beam for ssd_5 with no Al filter . . . . .	4 – 42
4.14	Data and XSPEC fit at the white beam for ssd_x with no Al filter. . . . .	4 – 45
4.15	Data and XSPEC fit for ssd_5 at the white beam with 27.4 $\mu m$ Al filter. . . . .	4 – 49
4.16	Data and XSPEC fit for ssd_x at the white beam with 27.4 $\mu m$ Al filter. . . . .	4 – 52
4.17	Data and XSPEC fit for ssd_5 at the white beam with 133.4 $\mu m$ Al filter. . . . .	4 – 56
4.18	Data and XSPEC fit for ssd_x at the white beam with 133.4 $\mu m$ Al filter. . . . .	4 – 59
5.1	Example SSD deadtime calibration $^{55}Fe$ spectrum . . . . .	5 – 5
6.1	HRMA HSI image with –9.7 mm defocus . . . . .	6 – 5
6.2	Shell 1 . . . . .	6 – 6
6.3	Shell 3 . . . . .	6 – 6
6.4	Shell 4 . . . . .	6 – 6
6.5	Shell 6 . . . . .	6 – 6
6.6	Al-K $\alpha$ (1.49 keV) . . . . .	6 – 7
6.7	Ti-K $\alpha$ (4.51 keV) . . . . .	6 – 7
6.8	Fe-K $\alpha$ (6.40 keV) . . . . .	6 – 7
6.9	Zn-K $\alpha$ (8.64 keV) . . . . .	6 – 7
6.10	Al-K $\alpha$ . Shell 1 . . . . .	6 – 8
6.11	Al-K $\alpha$ . Shell 3 . . . . .	6 – 8
6.12	Al-K $\alpha$ . Shell 4 . . . . .	6 – 8
6.13	Al-K $\alpha$ . Shell 6 . . . . .	6 – 8
6.14	Al-K $\alpha$ . HRMA . . . . .	6 – 9
6.15	Ti-K $\alpha$ . HRMA . . . . .	6 – 9
6.16	Fe-K $\alpha$ . HRMA . . . . .	6 – 9
6.17	Zn-K $\alpha$ . HRMA . . . . .	6 – 9
6.18	Al-K $\alpha$ . HRMA . . . . .	6 – 10

6.19	Ti-K $\alpha$ . HRMA.	6 – 10
6.20	Fe-K $\alpha$ . HRMA.	6 – 10
6.21	Zn-K $\alpha$ . HRMA.	6 – 10
6.22	Al-K $\alpha$ . HRMA.	6 – 11
6.23	Ti-K $\alpha$ . HRMA.	6 – 11
6.24	Fe-K $\alpha$ . HRMA.	6 – 11
6.25	Zn-K $\alpha$ . HRMA.	6 – 11
6.26	HXDS FPC-X2 Mesh Scan data fit to the model. Date: 96/12/21	6 – 12
6.27	HXDS FPC-X2 Mesh Scan data fit to the model. Date: 96/12/24	6 – 13
6.28	HXDS FPC-X2 Mesh Scan data fit to the model. Date: 97/01/15	6 – 14
6.29	HXDS FPC-X2 Mesh Center Offset.	6 – 15
7.1	Angular dependence of relative quantum efficiency. B-K and C-K.	7 – 3
7.1	(continued) O-K and Fe-L.	7 – 4
7.1	(continued) Cu-L and Mg-K.	7 – 5
7.1	(continued) Al-K and Mo-L.	7 – 6
7.1	(continued) Sn-L and Ti-K.	7 – 7
7.1	(continued) Fe-K.	7 – 8
7.2	HSI post-processing electronics fast discriminator count rate linearity	7 – 9
7.3	HSI post-processing electronics image count rate linearity	7 – 9
7.4	Sample flat field <i>FPC</i> scan pattern	7 – 11
7.5	<i>FPC</i> flat field profile scans. C-K and Fe-L.	7 – 12
7.5	(continued) Al-K and Fe-K.	7 – 13
7.6	<i>HSI</i> super flat field.	7 – 14
7.7	Central <i>HSI</i> tile, showing region of degraded sensitivity	7 – 15
7.8	Horizontal cut across region shown in Figure 7.7.	7 – 16
7.9	Low sensitivity region of <i>HSI</i> (+Y, -Z)	7 – 17
7.10	Central 3 × 3 tile region of <i>HSI</i> flat field	7 – 18
7.11	+Y, +Z region of <i>HSI</i> flat field, showing variable gap width	7 – 19
7.12	<i>HSI</i> super flat Z projection.	7 – 20
7.13	<i>HSI</i> super flat Z projection (detail).	7 – 21
7.14	<i>HSI</i> super flat Y projection.	7 – 21
7.15	<i>HSI</i> super flat Y projection (detail).	7 – 22
8.1	The HXDA translation stages and detectors	8 – 2
9.1	Sample JMKmod log file, obtained with the <code>show all</code> command in XSPEC	9 – 6
9.2	Sample JMKmod spectral fit to Ti K- $\alpha$ spectrum.	9 – 7
9.3	Line shape parameters for the <i>fpc_x2</i> as functions of energy. Top: Fano factor, and Bottom: Shelf norm	9 – 10
9.4	Line shape parameters for the <i>fpc_hn</i> as functions of energy. Top: Fano factor, and Bottom: Shelf norm	9 – 11
11.1	C-continuum SSX and SS5 spectra: Shell 1	11 – 4
11.2	C-continuum SSX and SS5 spectra: Shell 3	11 – 5
11.3	C-continuum SSX and SS5 spectra: Shell 4	11 – 6
11.4	C-continuum SSX and SS5 spectra: Shell 6	11 – 7
11.5	SSX and SS5 pulser spectra: Shell 1	11 – 9
11.6	SSX and SS5 pulser spectra: Shell 3	11 – 10

11.7	SSX and SS5 pulser spectra: Shell 4	11 – 11
11.8	SSX and SS5 pulser spectra: Shell 6	11 – 12
11.9	SSX spectrum and pileup correction: Shell 1	11 – 14
11.10	SSX spectrum and pileup correction: Shell 3	11 – 15
11.11	SSX spectrum and pileup correction: Shell 4	11 – 16
11.12	SSX spectrum and pileup correction: Shell 6	11 – 17
11.13	SS5 spectrum and pileup correction: Shell 1	11 – 18
11.14	SS5 spectrum and pileup correction: Shell 3	11 – 19
11.15	SS5 spectrum and pileup correction: Shell 4	11 – 20
11.16	SS5 spectrum and pileup correction: Shell 6	11 – 21
11.17	C-continuum flat field test SSX and SS5 spectra	11 – 23
11.18	SSX and SS5 energy scales for the flat field test (Phase-J)	11 – 24
11.19	SSX and SS5 energy scale linear fit residuals for the flat field test (Phase-J)	11 – 25
11.20	C-continuum flat field test SSX and SS5 spectra as functions of energy	11 – 26
11.21	SSX and SS5 energy scales for the C-continuum effective area measurements (Phase-E)	11 – 28
11.22	SSX and SS5 energy scale linear fit residuals for the C-continuum effective area measurements (Phase-E)	11 – 29
11.23	SSX and SS5 energy scales for the C-continuum effective area measurements (Phase-D)	11 – 30
11.24	SSX and SS5 energy scale linear fit residuals for the C-continuum effective area measurements (Phase-D)	11 – 31
11.25	C-continuum flat field test SSX and SS5 pulser spectra	11 – 33
11.26	C-continuum source beam uniformity test	11 – 35
11.27	C-continuum FPC-5 beam flux ratio	11 – 36
11.28	SS5/SSX quantum efficiency ratio	11 – 38
11.29	SSD 500 icing data	11 – 40
11.30	X-ray transmission of ice	11 – 41
11.31	SSX and SS5 spectra of background run	11 – 43
11.32	SSD C-continuum effective area measurement: Shell 1	11 – 44
11.33	SSD C-continuum effective area measurement: Shell 3	11 – 45
11.34	SSD C-continuum effective area measurement: Shell 4	11 – 46
11.35	SSD C-continuum effective area measurement: Shell 6	11 – 47
11.36	Calibration data vs. raytrace prediction: Shell 1	11 – 50
11.37	Calibration data vs. raytrace prediction: Shell 3	11 – 51
11.38	Calibration data vs. raytrace prediction: Shell 4	11 – 52
11.39	Calibration data vs. raytrace prediction: Shell 6	11 – 53
11.40	Calibration data vs. raytrace prediction: HRMA	11 – 55
11.41	Raytrace prediction of XRCF Shell 1 effective area and encircled energy	11 – 57
11.42	Raytrace prediction of XRCF Shell 3 effective area and encircled energy	11 – 58
11.43	Raytrace prediction of XRCF Shell 4 effective area and encircled energy	11 – 59
11.44	Raytrace prediction of XRCF Shell 6 effective area and encircled energy	11 – 60
11.45	Raytrace prediction of XRCF HRMA effective area and encircled energy	11 – 61
11.46	Raytrace prediction of on-orbit Shell 1 effective area and encircled energy	11 – 62
11.47	Raytrace prediction of on-orbit Shell 3 effective area and encircled energy	11 – 63
11.48	Raytrace prediction of on-orbit Shell 4 effective area and encircled energy	11 – 64
11.49	Raytrace prediction of on-orbit Shell 6 effective area and encircled energy	11 – 65

11.50	Raytrace prediction of on-orbit HRMA effective area and encircled energy . . . . .	11 – 66
11.51	XRCF HRMA and four shells effective areas within 2 mm aperture . . . . .	11 – 68
11.52	XRCF HRMA and four shells effective areas within 35 mm aperture . . . . .	11 – 69
11.53	XRCF HRMA and four shells effective areas within $2\pi$ steradian . . . . .	11 – 70
11.54	On-orbit HRMA and four shells effective areas within 2 mm aperture . . . . .	11 – 78
11.55	On-orbit HRMA and four shells effective areas within 35 mm aperture . . . . .	11 – 79
11.56	On-orbit HRMA and four shells effective areas within $2\pi$ steradian . . . . .	11 – 80
12.1	Shell 1 & 3 Effective Areas through 35 mm pinholes . . . . .	12 – 7
12.2	Shell 4 & 6 Effective Areas through 35 mm pinholes . . . . .	12 – 8
12.3	Full HRMA Effective Areas through 35 mm pinholes . . . . .	12 – 13
12.4	Shell 1 & 3 Effective Areas through 2 mm pinholes . . . . .	12 – 14
12.5	Shell 4 & 6 Effective Areas through 2 mm pinholes . . . . .	12 – 15
12.6	Full HRMA Effective Areas through 2 mm pinholes . . . . .	12 – 16
12.7	Full HRMA Effective Areas through 2 mm pinholes . . . . .	12 – 17
13.1	Multilayer mirror . . . . .	13 – 2
13.2	Shell 1 effective area and residuals through 2mm pinhole . . . . .	13 – 4
13.3	Shell 3 effective area and residuals through 2mm pinhole . . . . .	13 – 5
13.4	Shell 4 effective area and residuals through 2mm pinhole . . . . .	13 – 6
13.5	Shell 6 effective area and residuals through 2mm pinhole . . . . .	13 – 7
13.6	Shell 1 SSD continuum effective area <i>vs.</i> model, 2.01 – 2.4 keV . . . . .	13 – 9
13.7	Shell 1 SSD continuum effective area <i>vs.</i> model, 2.25 – 2.9 keV . . . . .	13 – 10
13.8	Shell 1 SSD continuum effective area <i>vs.</i> model, 2.8 – 4.0 keV . . . . .	13 – 11
13.9	Shell 1 SSD continuum effective area <i>vs.</i> model, 3.9 – 7.0 keV . . . . .	13 – 12
13.10	Shell 1 SSD continuum effective area <i>vs.</i> model, 5.0 – 8.5 keV . . . . .	13 – 13
13.11	Shell 1 SSD continuum effective area <i>vs.</i> model, 8.0 – 12.0 keV . . . . .	13 – 14
13.12	Shell 3 SSD continuum effective area <i>vs.</i> model, 2.01 – 2.4 keV . . . . .	13 – 15
13.13	Shell 3 SSD continuum effective area <i>vs.</i> model, 2.25 – 2.9 keV . . . . .	13 – 16
13.14	Shell 3 SSD continuum effective area <i>vs.</i> model, 2.8 – 4.0 keV . . . . .	13 – 17
13.15	Shell 3 SSD continuum effective area <i>vs.</i> model, 3.9 – 7.0 keV . . . . .	13 – 18
13.16	Shell 3 SSD continuum effective area <i>vs.</i> model, 5.0 – 8.5 keV . . . . .	13 – 19
13.17	Shell 3 SSD continuum effective area <i>vs.</i> model, 8.0 – 12.0 keV . . . . .	13 – 20
13.18	Shell 4 SSD continuum effective area <i>vs.</i> model, 2.01 – 2.4 keV . . . . .	13 – 21
13.19	Shell 4 SSD continuum effective area <i>vs.</i> model, 2.25 – 2.9 keV . . . . .	13 – 22
13.20	Shell 4 SSD continuum effective area <i>vs.</i> model, 2.25 – 2.9 keV . . . . .	13 – 23
13.21	Shell 4 SSD continuum effective area <i>vs.</i> model, 3.9 – 7.0 keV . . . . .	13 – 24
13.22	Shell 4 SSD continuum effective area <i>vs.</i> model, 5.0 – 8.5 keV . . . . .	13 – 25
13.23	Shell 4 SSD continuum effective area <i>vs.</i> model, 8.0 – 12.0 keV . . . . .	13 – 26
13.24	Shell 6 SSD continuum effective area <i>vs.</i> model, 2.01 – 2.4 keV . . . . .	13 – 28
13.25	Shell 6 SSD continuum effective area <i>vs.</i> model, 2.25 – 2.9 keV . . . . .	13 – 29
13.26	Shell 6 SSD continuum effective area <i>vs.</i> model, 2.8 – 4.0 keV . . . . .	13 – 30
13.27	Shell 6 SSD continuum effective area <i>vs.</i> model, 3.9 – 7.0 keV . . . . .	13 – 31
13.28	Shell 6 SSD continuum effective area <i>vs.</i> model, 5.0 – 8.5 keV . . . . .	13 – 32
13.29	Shell 6 SSD continuum effective area <i>vs.</i> model, 8.0 – 12.0 keV . . . . .	13 – 33
14.1	Effect of quadrant shutter vignetting: shell 3 <i>vs.</i> shell 4. . . . .	14 – 9
14.2	Effect of quadrant shutter vignetting. . . . .	14 – 10

14.3	Quadrant shutter vignetting: at the quadrant shutter plane. . . . .	14 – 11
14.4	Pinhole effective areas; Shell 1T at Al-K $\alpha$ . . . . .	14 – 12
14.5	Pinhole effective areas; Shell 1N at Al-K $\alpha$ . . . . .	14 – 13
14.6	Pinhole effective areas; Shell 1B at Al-K $\alpha$ . . . . .	14 – 14
14.7	Pinhole effective areas; Shell 1S at Al-K $\alpha$ . . . . .	14 – 15
14.8	Pinhole effective areas; Shell 1T at Ti-K $\alpha$ . . . . .	14 – 16
14.9	Pinhole effective areas; Shell 1N at Ti-K $\alpha$ . . . . .	14 – 17
14.10	Pinhole effective areas; Shell 1B at Ti-K $\alpha$ . . . . .	14 – 18
14.11	Pinhole effective areas; Shell 1S at Ti-K $\alpha$ . . . . .	14 – 19
14.12	Pinhole effective areas; Shell 3T at Al-K $\alpha$ . . . . .	14 – 20
14.13	Pinhole effective areas; Shell 3N at Al-K $\alpha$ . . . . .	14 – 21
14.14	Pinhole effective areas; Shell 3B at Al-K $\alpha$ . . . . .	14 – 22
14.15	Pinhole effective areas; Shell 3S at Al-K $\alpha$ . . . . .	14 – 23
14.16	Pinhole effective areas; Shell 3S at Ti-K $\alpha$ . . . . .	14 – 24
14.17	Pinhole effective areas; Shell 3S at Cr-K $\alpha$ . . . . .	14 – 25
14.18	Pinhole effective areas; Shell 3T at Fe-K $\alpha$ . . . . .	14 – 26
14.19	Pinhole effective areas; Shell 3N at Fe-K $\alpha$ . . . . .	14 – 27
14.20	Pinhole effective areas; Shell 3B at Fe-K $\alpha$ . . . . .	14 – 28
14.21	Pinhole effective areas; Shell 3S at Fe-K $\alpha$ . . . . .	14 – 29
14.22	Pinhole effective areas; Shell 4T at Al-K $\alpha$ . . . . .	14 – 30
14.23	Pinhole effective areas; Shell 4N at Al-K $\alpha$ . . . . .	14 – 31
14.24	Pinhole effective areas; Shell 4B at Al-K $\alpha$ . . . . .	14 – 32
14.25	Pinhole effective areas; Shell 4S at Al-K $\alpha$ . . . . .	14 – 33
14.26	Pinhole effective areas; Shell 4S at Ti-K $\alpha$ . . . . .	14 – 34
14.27	Pinhole effective areas; Shell 4S at Cr-K $\alpha$ . . . . .	14 – 35
14.28	Pinhole effective areas; Shell 4T at Fe-K $\alpha$ . . . . .	14 – 36
14.29	Pinhole effective areas; Shell 4N at Fe-K $\alpha$ . . . . .	14 – 37
14.30	Pinhole effective areas; Shell 4B at Fe-K $\alpha$ . . . . .	14 – 38
14.31	Pinhole effective areas; Shell 4S at Fe-K $\alpha$ . . . . .	14 – 39
14.32	Pinhole effective areas; Shell 4S at Cu-K $\alpha$ . . . . .	14 – 40
14.33	Pinhole effective areas; Shell 6B at C-K $\alpha$ . . . . .	14 – 41
14.34	Pinhole effective areas; Shell 6T at Al-K $\alpha$ . . . . .	14 – 42
14.35	Pinhole effective areas; Shell 6N at Al-K $\alpha$ . . . . .	14 – 43
14.36	Pinhole effective areas; Shell 6B at Al-K $\alpha$ . . . . .	14 – 44
14.37	Pinhole effective areas; Shell 6S at Al-K $\alpha$ . . . . .	14 – 45
14.38	Pinhole effective areas; Shell 6S at Ti-K $\alpha$ . . . . .	14 – 46
14.39	Pinhole effective areas; Shell 6S at Cr-K $\alpha$ . . . . .	14 – 47
14.40	Pinhole effective areas; Shell 6T at Fe-K $\alpha$ . . . . .	14 – 48
14.41	Pinhole effective areas; Shell 6B at Fe-K $\alpha$ . . . . .	14 – 49
14.42	Pinhole effective areas; Shell 6S at Fe-K $\alpha$ . . . . .	14 – 50
14.43	Pinhole effective areas; Shell 6T at Cu-K $\alpha$ . . . . .	14 – 51
14.44	Pinhole effective areas; Shell 6N at Cu-K $\alpha$ . . . . .	14 – 52
14.45	Pinhole effective areas; Shell 6B at Cu-K $\alpha$ . . . . .	14 – 53
14.46	Pinhole effective areas; Shell 6S at Cu-K $\alpha$ . . . . .	14 – 54
14.47	Pinhole effective areas; Shell 6B at C-K $\alpha$ ( <i>transverse scans</i> ). . . . .	14 – 56

14.48	Pinhole effective areas. Left: 1 mm pinhole scan, Shell 3B at Al-K $\alpha$ . Right: 4 mm pinhole scan, Shell 3B at Al-K $\alpha$ . These 3B Y-scans were performed in order to correct the in-plane 4N4S and 6N6S scans which were made with the 3B shutter stuck open. ( <i>transverse scans</i> ). . . . .	14 – 57
14.49	Pinhole effective areas; Shell 4NS at Al-K $\alpha$ . . . . .	14 – 59
14.50	Pinhole effective areas; Shell 6NS at Al-K $\alpha$ . . . . .	14 – 60
15.1	Shell 1T: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 7
15.2	Shell 1N: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 8
15.3	Shell 1B: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 9
15.4	Shell 1S: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 10
15.5	Shell 1T: Ti-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 11
15.6	Shell 1N: Ti-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 12
15.7	Shell 1B: Ti-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 13
15.8	Shell 1S: Ti-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 14
15.9	Shell 3T: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 17
15.10	Shell 3N: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 18
15.11	Shell 3B: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 19
15.12	Shell 3S: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 20
15.13	Shell 3S: Ti-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 21
15.14	Shell 3S: Cr-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 22
15.15	Shell 3T: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 23
15.16	Shell 3N: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 24
15.17	Shell 3B: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 25
15.18	Shell 3S: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 26
15.19	Shell 4T: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 29
15.20	Shell 4N: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 30
15.21	Shell 4B: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 31
15.22	Shell 4S: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 32
15.23	Shell 4S: Ti-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 33
15.24	Shell 4S: Cr-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 34
15.25	Shell 4T: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 35
15.26	Shell 4N: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 36
15.27	Shell 4B: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 37
15.28	Shell 4S: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 38
15.29	Shell 4S: Cu-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 39
15.30	Shell 6B: C-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 42
15.31	Shell 6T: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 43
15.32	Shell 6N: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 44
15.33	Shell 6B: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 45
15.34	Shell 6S: Al-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 46
15.35	Shell 6S: Ti-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 47
15.36	Shell 6S: Cr-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 48
15.37	Shell 6T: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 49
15.38	Shell 6N: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 50
15.39	Shell 6B: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 51
15.40	Shell 6S: Fe-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 52
15.41	Shell 6T: Cu-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 53

15.42	Shell 6N: Cu-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 54
15.43	Shell 6B: Cu-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 55
15.44	Shell 6S: Cu-K $\alpha$ surface brightness, towards and away from the optic . . . . .	15 – 56
15.45	Double quadrant wing scan surface brightness: Al-K $\alpha$ . Top: Shell 4, N and S quadrant. Bottom: Shell 6, N and S quadrant. . . . .	15 – 58
15.46	Out-of-plane scans, compared to in-plane scans. Top left: 6B Y scan at C-K $\alpha$ (out of plane). Top right: 6B Z scan at C-K $\alpha$ (in plane, towards optic). Bottom left: 3B Y scan at Al-K $\alpha$ (out of plane). Bottom right: 3B Z scan at Al-K $\alpha$ (in plane). . . . .	15 – 59
15.47	Surface Brightness <i>vs.</i> Radius for Shell 1S at Ti K $\alpha$ . . . . .	15 – 60
15.48	Shell 1T: 2W <sub>1</sub> profiles, towards and away from the optic. XRCF data ( <i>xref</i> ) <i>vs.</i> raytrace data ( <i>sim</i> ). . . . .	15 – 63
15.49	Shell 1N: 2W <sub>1</sub> profiles, towards and away from the optic. XRCF data ( <i>xref</i> ) <i>vs.</i> raytrace data ( <i>sim</i> ). . . . .	15 – 64
15.50	Shell 1B: 2W <sub>1</sub> profiles, towards and away from the optic. XRCF data ( <i>xref</i> ) <i>vs.</i> raytrace data ( <i>sim</i> ). . . . .	15 – 65
15.51	Shell 1S: 2W <sub>1</sub> profiles, towards and away from the optic. XRCF data ( <i>xref</i> ) <i>vs.</i> raytrace data ( <i>sim</i> ). . . . .	15 – 66
15.52	Shell 3T: 2W <sub>1</sub> profiles, towards and away from the optic. XRCF data ( <i>xref</i> ) <i>vs.</i> raytrace data ( <i>sim</i> ). . . . .	15 – 68

11.12	On-orbit HRMA Effective Area within $2\pi$ Steradian. Units: cm <sup>2</sup> (continued)	11 – 86
12.1	Encircled Energy tests analyzed for the HRMA effective area	12 – 2
12.2	Ancillary tests used in the effective area analysis.	12 – 3
12.3	Effective Area results for 35 mm apertures	12 – 6
12.4	Effective Area results for 2 mm apertures	12 – 9
13.1	Shells 1, 3, 4, and 6 reduced $\chi^2$ and $\sigma$	13 – 8
13.2	Shell 1 reduced $\chi^2$ and $\sigma$	13 – 34
13.3	Shell 3 reduced $\chi^2$ and $\sigma$	13 – 34
13.4	Shell 4 reduced $\chi^2$ and $\sigma$	13 – 34
13.5	Shell 6 reduced $\chi^2$ and $\sigma$	13 – 34
14.1	XRCF Single Quadrant Wing Scan Measurements (by shell)	14 – 2
14.2	XRCF Double Quadrant Wing Scan Measurements	14 – 3
14.3	Single Quadrant Pitch/Yaw values	14 – 3
14.4	Effect of Mesh on Wing Scans	14 – 4
15.1	Wing scan shutter vignetting cutoffs	15 – 4
15.2	Surface brightness fits (raytrace and XRCF data; Shell 1)	15 – 6
15.3	Surface brightness fits (Raytrace, Shell 3)	15 – 15
15.4	Surface brightness fits (XRCF data, Shell 3)	15 – 16
15.5	Surface brightness fits (raytrace, Shell 4)	15 – 27
15.6	Surface brightness fits (XRCF data, Shell 4)	15 – 28
15.7	Surface brightness fits (raytrace, Shell 6)	15 – 40
15.8	Surface brightness fits (XRCF data, Shell 6)	15 – 41
15.9	Surface brightness fits (double quadrant scans, 4N4S)	15 – 57
15.10	Surface brightness fits (double quadrant scans, 6N6S)	15 – 57
15.11	Single quadrant wingscan $2W_1$ fits and mean square roughness (Raytrace simulation and XRCF data, Shell 1)	15 – 62
15.12	Single quadrant wingscan $2W_1$ fits and mean square roughness (Raytrace simulation and XRCF data, Shell 3)	15 – 67
15.13	Single quadrant wingscan $2W_1$ fits and mean square roughness (Raytrace simulation and XRCF data, Shell 4)	15 – 72
15.14	Single quadrant wingscan $2W_1$ fits and mean square roughness (Raytrace simulation and XRCF data, Shell 6)	15 – 77
15.15	Double quadrant wingscan $2W_1$ fits and mean square roughness (Raytrace simulation and XRCF data, Shell 4NS)	15 – 82
15.16	Double quadrant wingscan $2W_1$ fits and mean square roughness (Raytrace simulation and XRCF data, Shell 6NS)	15 – 82
18.1	HRMA Ring Focus Measurement data	18 – 2
20.1	Phase 1 Off-Axis Images with P6 or H6 ghosts	20 – 7
21.1	Mesh Plane HSI images	21 – 2
21.2	Focus distance from CAP Datum –A– plane for EIPS Al-K $\alpha$ source	21 – 3
21.3	Vertical/Horizontal ratios for meshplane HSI image	21 – 3

*LIST OF TABLES*

---

21.4	Parameters for the quasi-elliptical annuli used to split apart the hsi111803i0 image	21 – 4
21.5	Ring radius parameters	21 – 4
22.1	Phase 1 Off-Axis Images (Full HRMA)	22 – 2
24.1	Fit Results for all EIPS BU Tests	24 – 6
25.1	HRMA Ring Focus Shutter Test Data	25 – 2
26.1	Best Estimate of XRCF Measured Focus of Shells, relative to Shell 3	26 – 2
26.2	Comparison of pre-XRCF Predictions of On-orbit and XRCF HRMA foci	26 – 4
26.3	As Measured Optic lengths and distances	26 – 5
26.4	Final Mirror Focal Positions at XRCF and on orbit	26 – 5
26.5	Test Data for HRMA Focus Tests: D-66 Series	26 – 6
26.6	Test Data for HRMA Focus Tests: D-67 Series	26 – 8
26.7	Test Data for HRMA Focus Tests: E-67 (Final) Series	26 – 9
27.1	HATS Fourier Coefficients (ATP augmented data set)	27 – 2
27.2	HATS ATP (Augmented) Data	27 – 3
27.3	HATS Fourier Coefficients	27 – 4
27.4	HATS Fourier Coefficients: $r^2$ -weighted $Q_0$ removed	27 – 4
27.5	Conversion to Lateral Parfocalization and Coma	27 – 5
27.6	Summary: HRMA Lateral Parfocalization and On-Axis Coma (SAOsac coordinates)	27 – 5
27.7	Conversion to Rigid Body Misalignment	27 – 6
27.8	Body-center rigid body coefficients ( <i>double-pass</i> coordinate system)	27 – 6
27.9	Body-center rigid body coefficients (standard SAOsac coordinate system)	27 – 7
27.10	SAOsac mirror parameters, baseline optic prescription	27 – 7
27.11	SAOsac mirror parameters, decenters and tilts from ATP data; as-measured axial mirror positions	27 – 8
27.12	Rigid-Body Mirror Parameters (EKCHDOS06)	27 – 8
27.13	Fourier Coefficients: HATS <i>vs.</i> raytrace	27 – 9
28.1	HRMA Tilt Angles	28 – 3
28.2	Summary of HRMA Tilt Angles	28 – 4
29.1	Offset from on-axis focus (mm), + towards HRMA	29 – 1
29.2	HXDS FOA Values During Off-Axis Tests	29 – 1
29.3	HSI PrimeX Values for Best On-Axis Focus	29 – 2
29.4	Off-Axis Focus Test Data	29 – 3
30.1	Phase 1 Off-Axis Images (Full HRMA)	30 – 6
30.2	Phase 1 Off-Axis Images (Individual Shell)	30 – 7
30.3	Measured Tilt-Compensated Decenters	30 – 16
A.1	HXDS detector locations in XRCF testing phases	A – 1
A.2	BND aperture areas	A – 2
A.3	Source distances to HXDS and HRMA equipment	A – 2

*LIST OF TABLES*

B.1	Relations between coordinate systems . . . . .	B – 3
B.2	Relations between coordinate systems . . . . .	B – 4
C.1	Quadrant Shutter Nomenclature . . . . .	C – 1
D.1	IAP table . . . . .	D – 4
E.1	Baffle plate information . . . . .	E – 4
E.2	FHS baffle plate axial positions . . . . .	E – 7
E.3	FHP as-built axial position <i>vs.</i> design. . . . .	E – 7
E.4	Precollimator baffle plate axial positions . . . . .	E – 10
E.5	Precollimator as-built baffle plate axial positions <i>vs.</i> design. . . . .	E – 12
E.6	AHS baffle plate axial information . . . . .	E – 12
E.7	AHS baffle plate axial positions . . . . .	E – 12
E.8	Aft HRMA Structure as-built baffle plate axial positions <i>vs.</i> design. . . . .	E – 13
E.9	HRMA Mirrors: axial locations with respect to the CAP. . . . .	E – 14
E.10	AXAF element interface data, Reid (1997) . . . . .	E – 15
E.11	HRMA P Mirrors: key axial locations . . . . .	E – 15
E.12	HRMA H Mirrors: key axial locations . . . . .	E – 16
E.13	Baffle and Obstruction tables . . . . .	E – 16
E.14	Raytrace and EKC baffle nomenclature . . . . .	E – 17
E.15	Precollimator and Forward Hrma Structure Baffle Data; Shell 1. . . . .	E – 18
E.16	Precollimator and Forward Hrma Structure Baffle Data; Shell 3. . . . .	E – 18
E.17	Precollimator and Forward Hrma Structure Baffle Data; Shell 4. . . . .	E – 19
E.18	Precollimator and Forward Hrma Structure Baffle Data; Shell 6. . . . .	E – 19
E.19	Aft Hrma Structure Baffle Data; Shell 1. . . . .	E – 20
E.20	Aft Hrma Structure Baffle Data; Shell 3. . . . .	E – 20
E.21	Aft Hrma Structure Baffle Data; Shell 4. . . . .	E – 21
E.22	Aft Hrma Structure Baffle Data; Shell 6. . . . .	E – 21
E.23	CAP Ghost Baffle Data. . . . .	E – 22
E.24	P6 Ghost Baffle Data. . . . .	E – 22
E.25	FTS Periscope Data. . . . .	E – 24
E.26	AXAF element axial data. . . . .	E – 25
E.27	HRMA Optic Prescription (including end cut) for ideal optics. . . . .	E – 26
E.28	Mirror clocking data. . . . .	E – 27
