

CIAO 3.2.1 Release Notes

Return to: [Version History](#)

The CIAO 3.2.1 patch contains updated versions of [acis_build_badpix](#) and [acis_run_hotpix](#). For more information on using these tools, please see the [Identify ACIS Hot Pixels and Cosmic Ray Afterglows thread](#), which has been updated to reflect the changes in this release.

- [acis_build_badpix](#) is updated to write a correct header in the output bad pixel file.
- [acis_run_hotpix](#) is updated to accept a parameter block file (`pbkfile` parameter). The `ahelp` file for the tool has been updated.

Make sure to delete any existing parameter file (`acis_run_hotpix.par`) in `~/cxcds_param` so that you pick up the CIAO 3.2.1 default version, which has a new parameter (`pbkfile`).

If you created a new bad pixel file with `acis_run_hotpix` in CIAO 3.2 *and the tool did not report any errors*, it is not necessary to recreate the file in CIAO 3.2.1.

The Chandra X-Ray Center (CXC) is operated for NASA by the Smithsonian Astrophysical Observatory,
60 Garden Street, Cambridge, MA 02138 USA.
