# Updating the ACIS Contamination model

Herman L. Marshall (MIT CXC)

CXC

MIT Kavli Institute  
for Astrophysics  
and Space Research

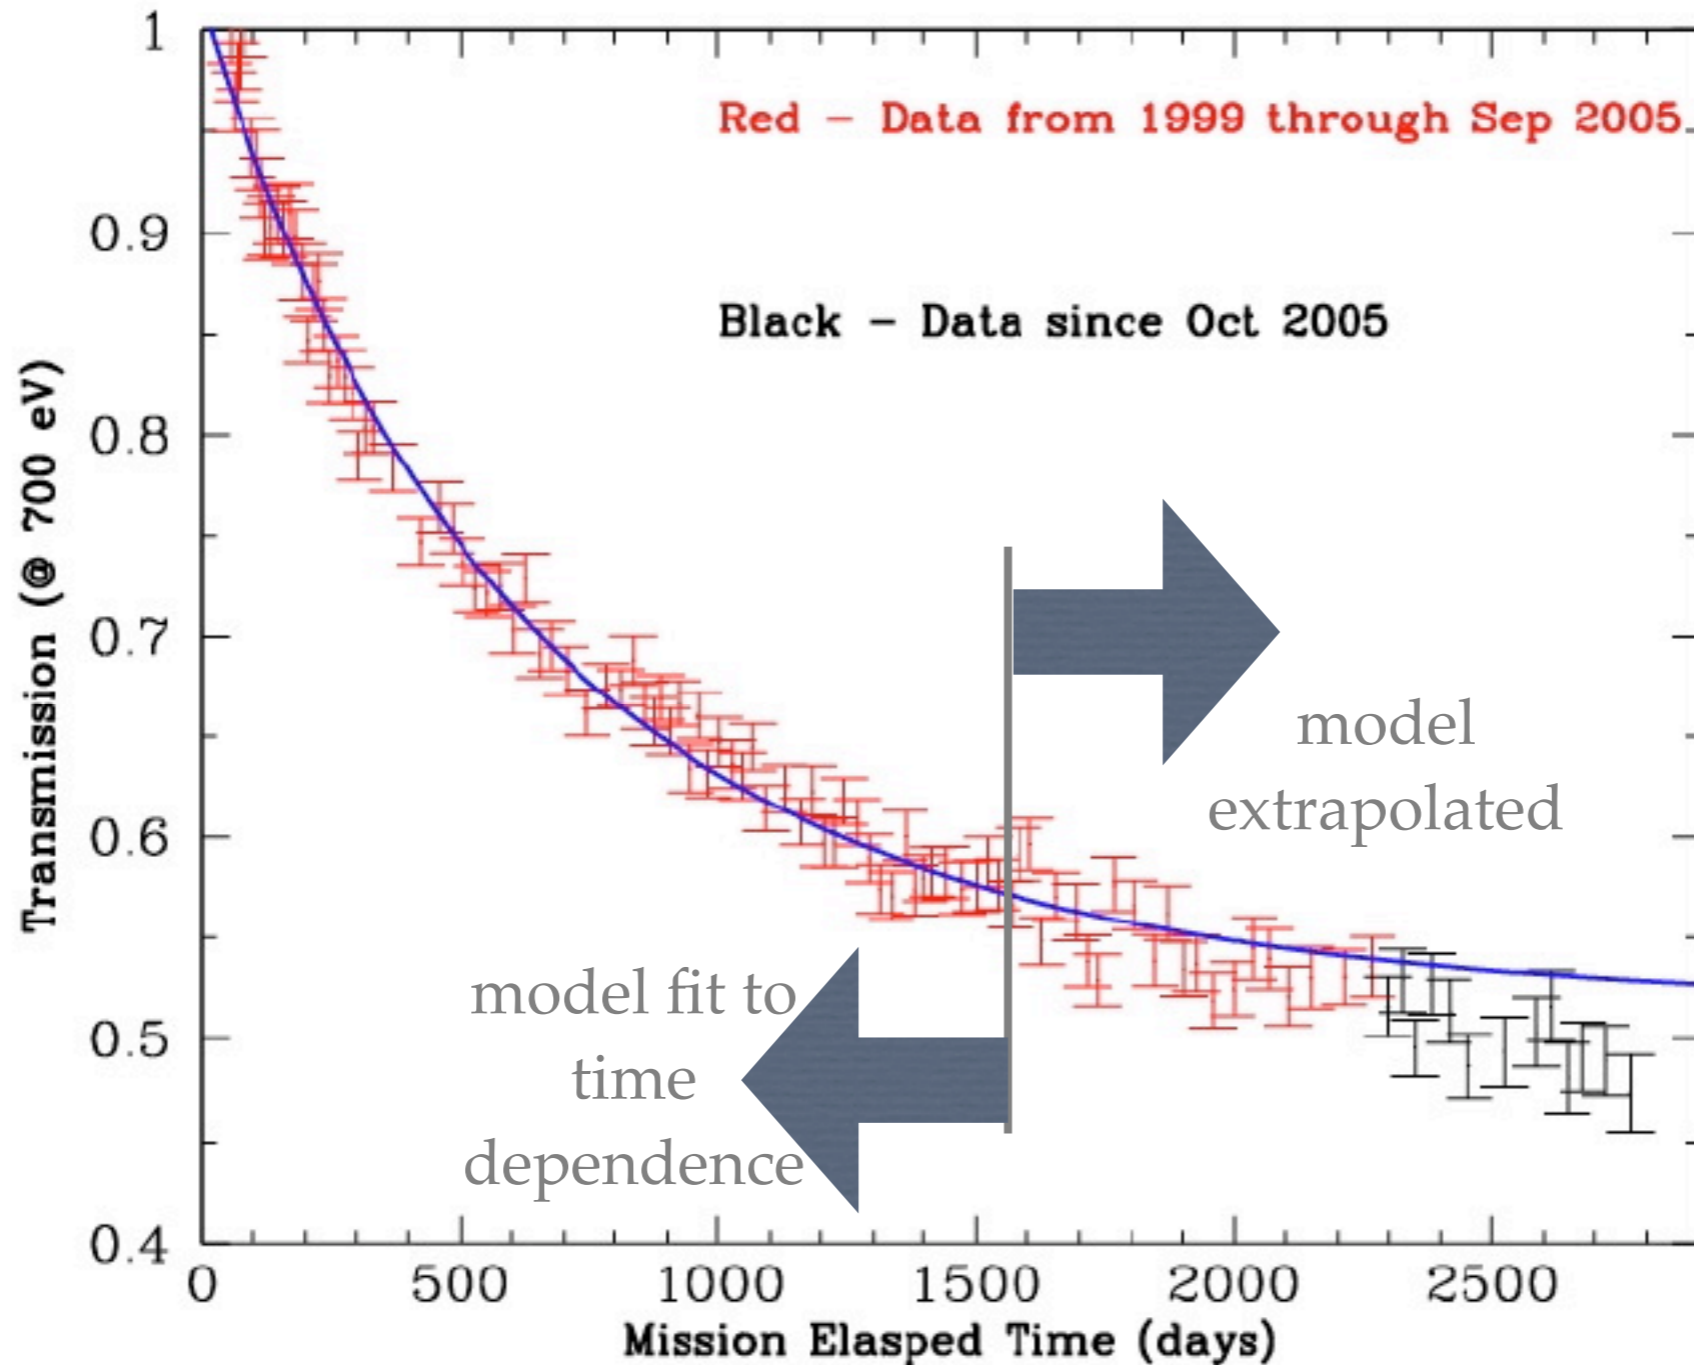

# Indications I

# Indications II

## Update on Contaminant Buildup

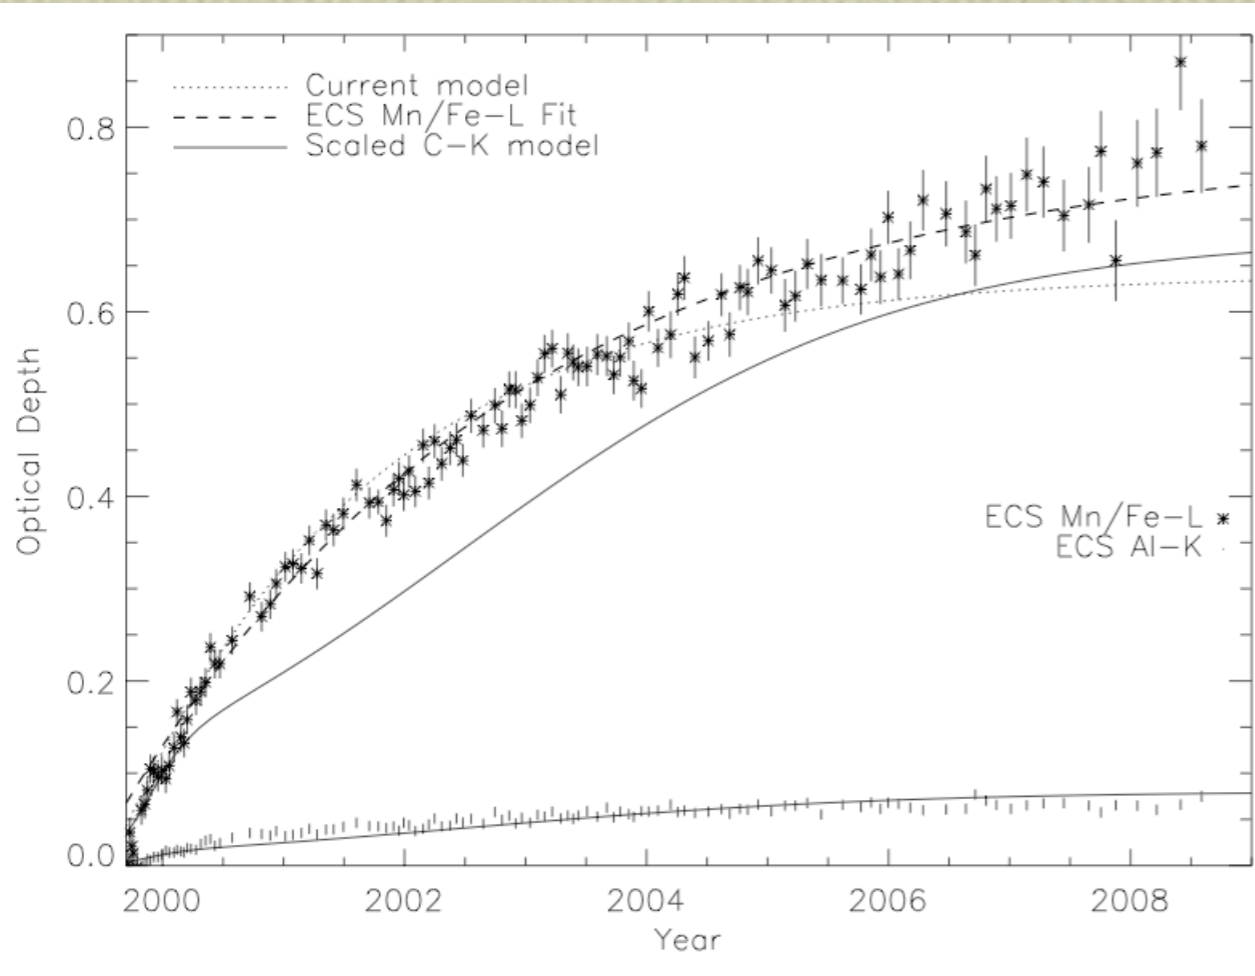

Data for all  
Of S3:  
Grant (MIT)

Model:  
O'Dell &  
Tennant  
(MSFC)  
For middle of  
S3  
Vikhlinin  
(SAO)

# Why Now?

Model no longer fit ECS  
data (HLM, 12/08)

AV confirms, 3/09

# Approach

- Begin with fits to  $\tau_{C-K}(t)$ ,  $\tau_{O-K}/\tau_{C-K}$ ,  $\tau_{F-K}/\tau_{C-K}$ 
  - Use LETG/ACIS blazar spectra
- Use  $\tau_{O-K}/\tau_{C-K}$ ,  $\tau_{F-K}/\tau_{C-K}$  to compute  $\tau_{0.66}(t)$ 
  - Compare to external cal source (ECS)
  - Model excess opacity with “fluffium”
- Model  $\tau_{C-K, \text{edge}}(t) - \tau_{C-K, \text{center}}(t)$
- Compute  $\tau_{0.66, \text{edge}}(t) - \tau_{0.66, \text{center}}(t)$ 
  - Compare to ECS measurements
  - Model excess opacity with fluffium
- Adjust fluffium spectrum using ECS  $\tau_{Al-K}(t)$
- Repeat for ACIS-I but without C-K

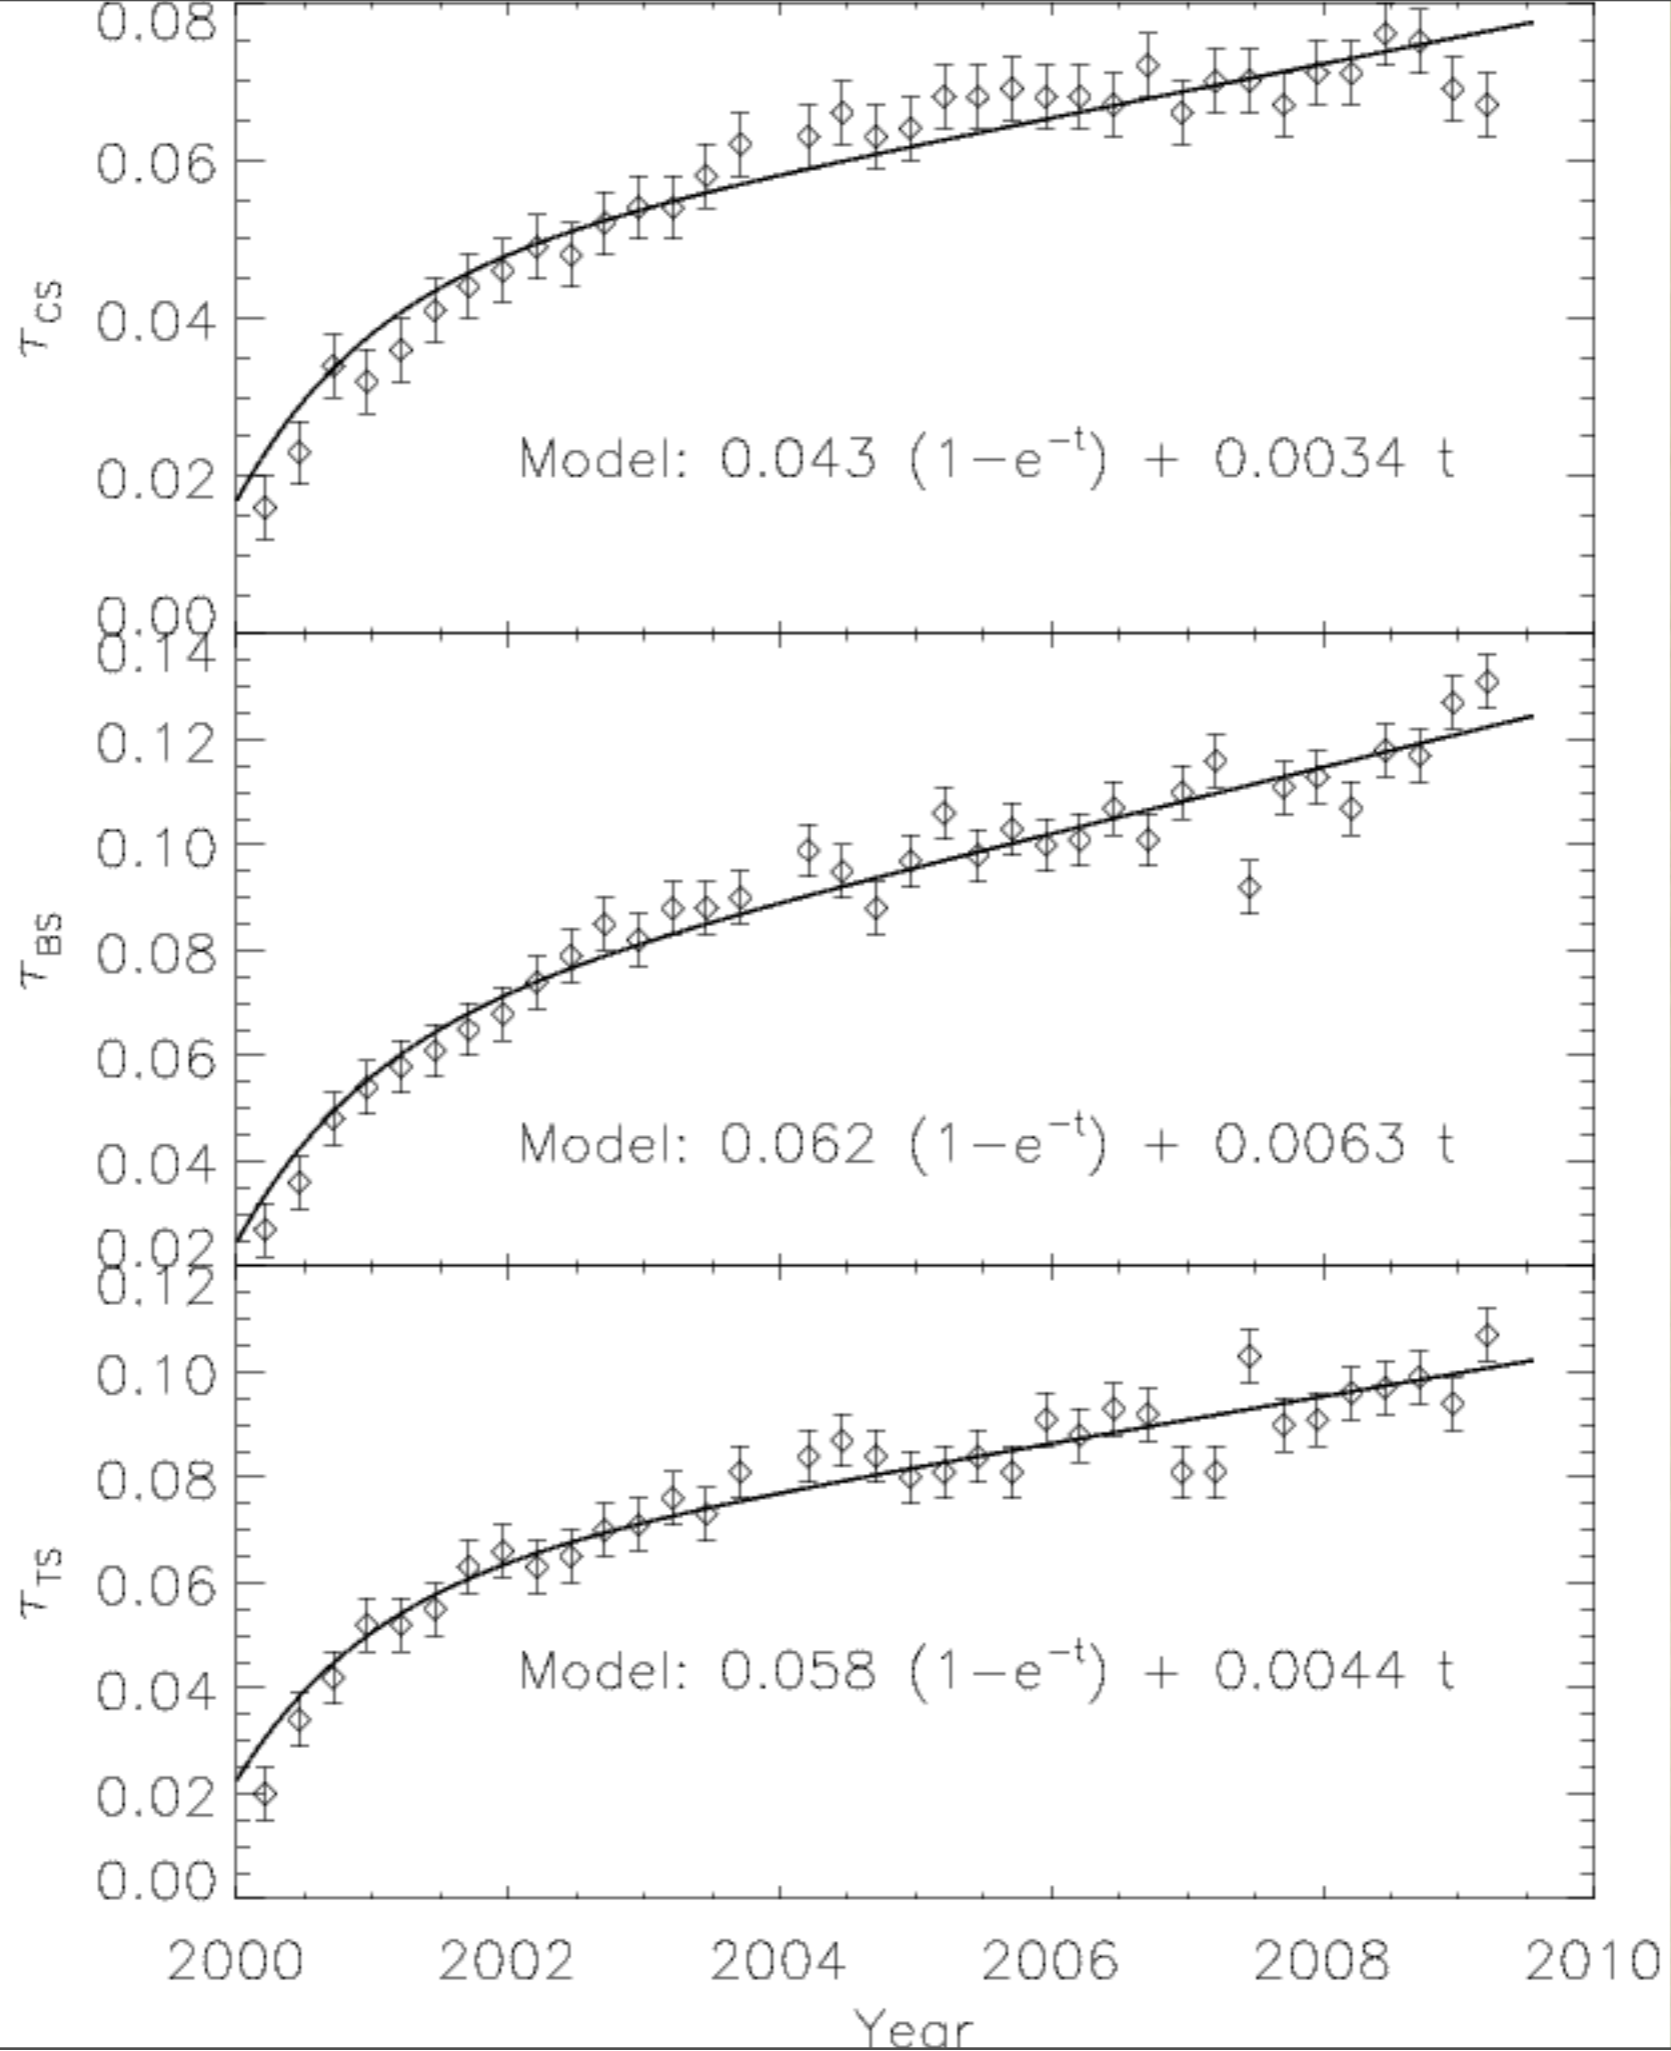

ECS fits  
660 eV

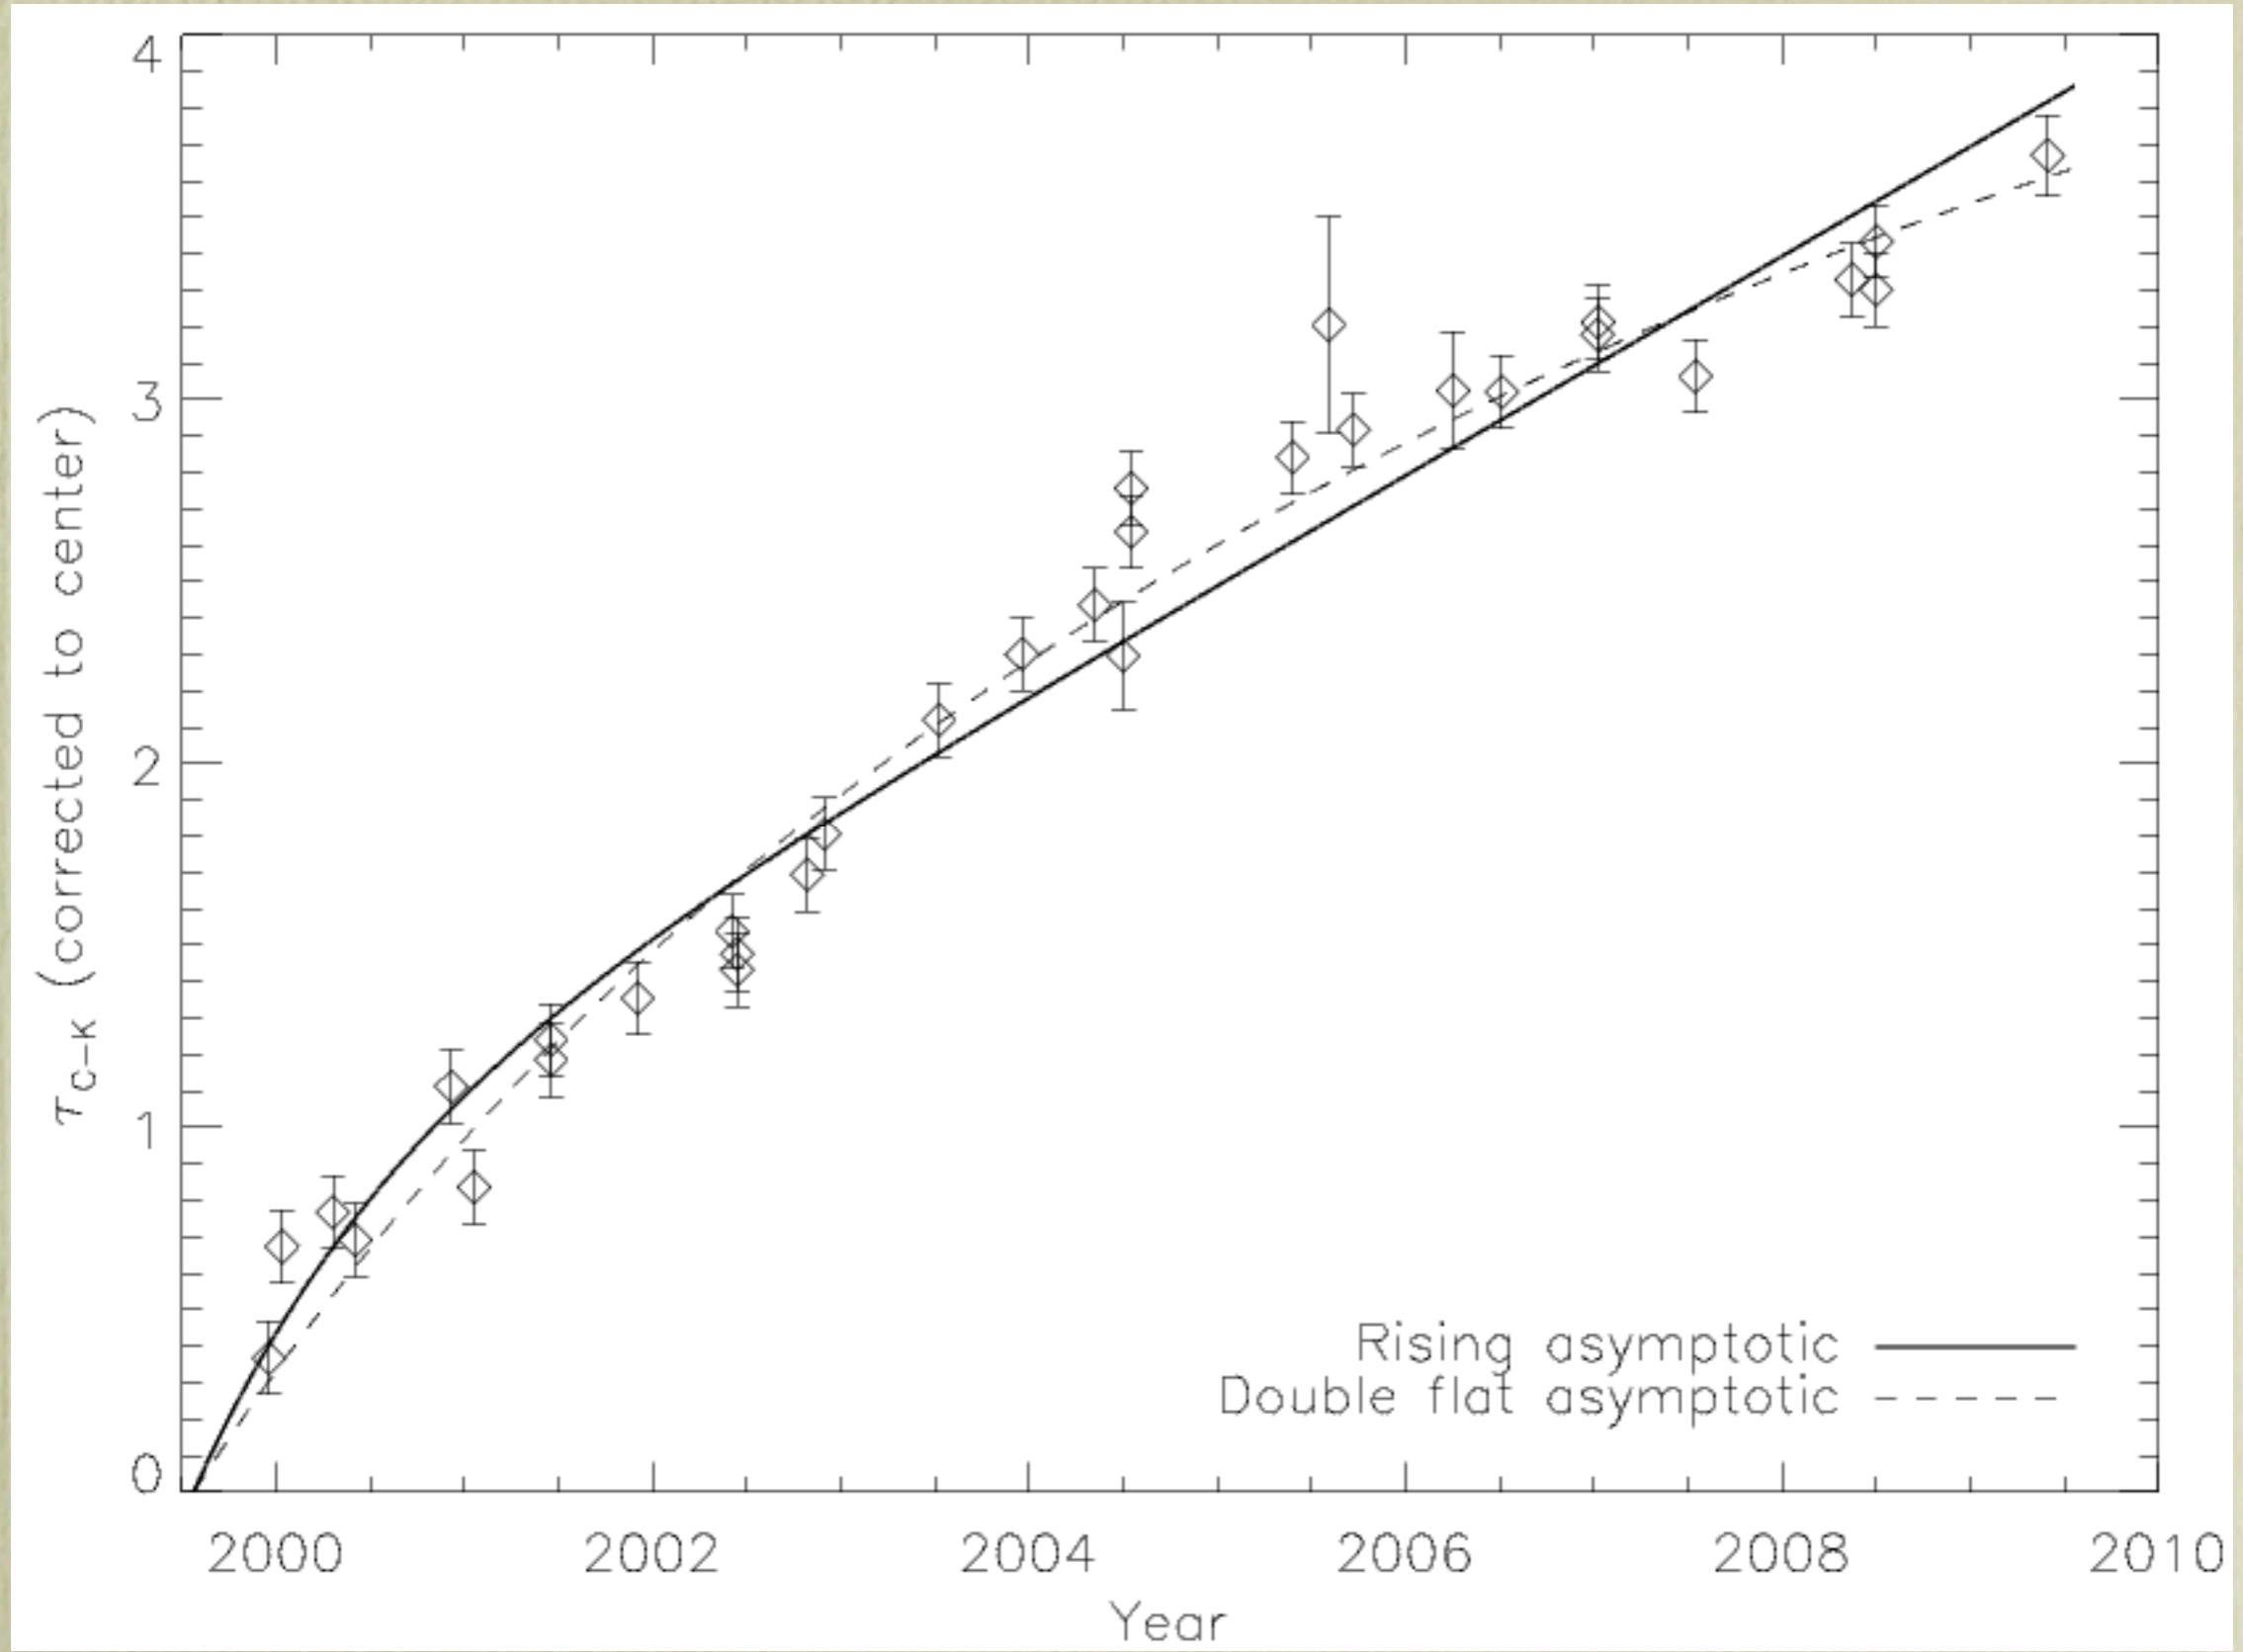

Data from  
Alexey  
Vikhlinin

ECS fits  
1.486 keV

Data from  
Alexey  
Vikhlinin

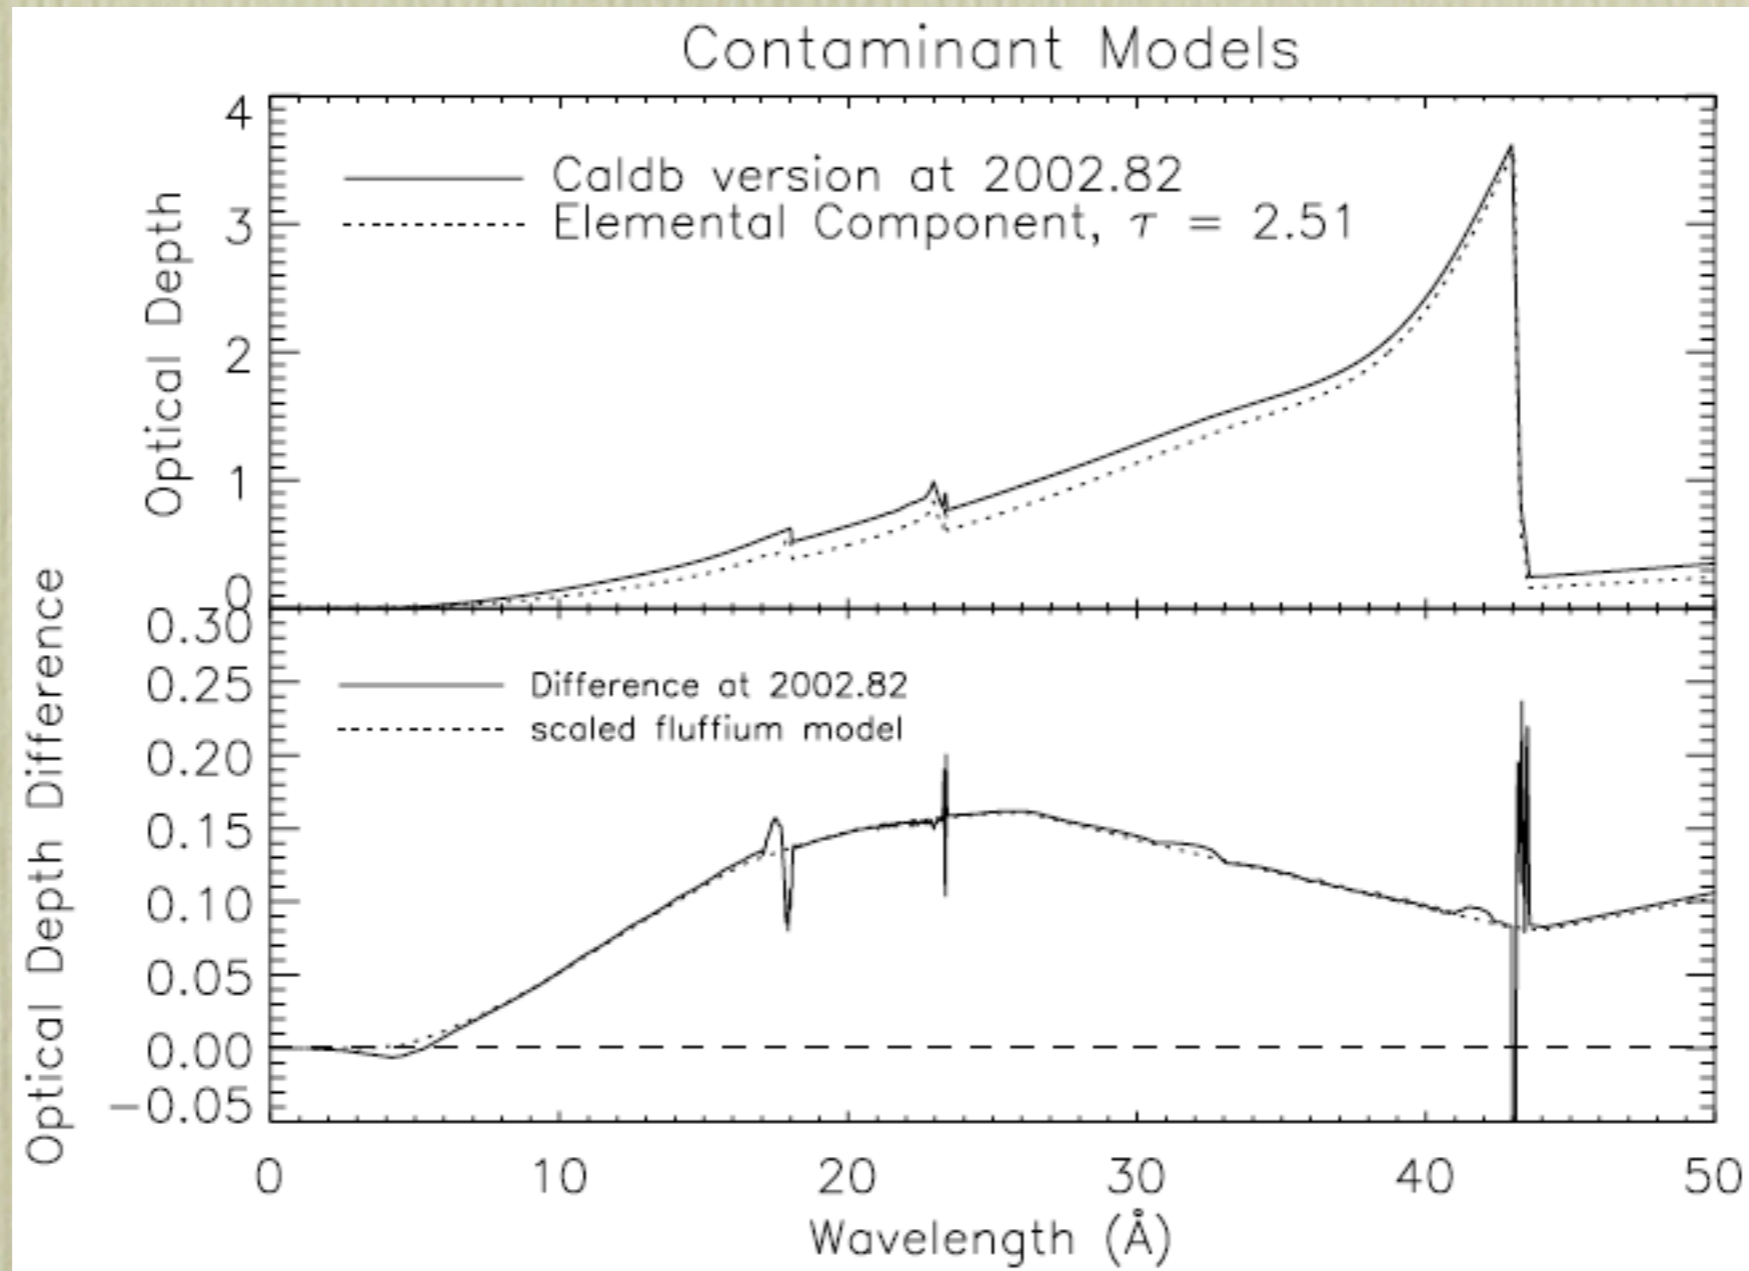

Model:  $0.86(1-e^{-t}) + 0.301t$

# Spectral model

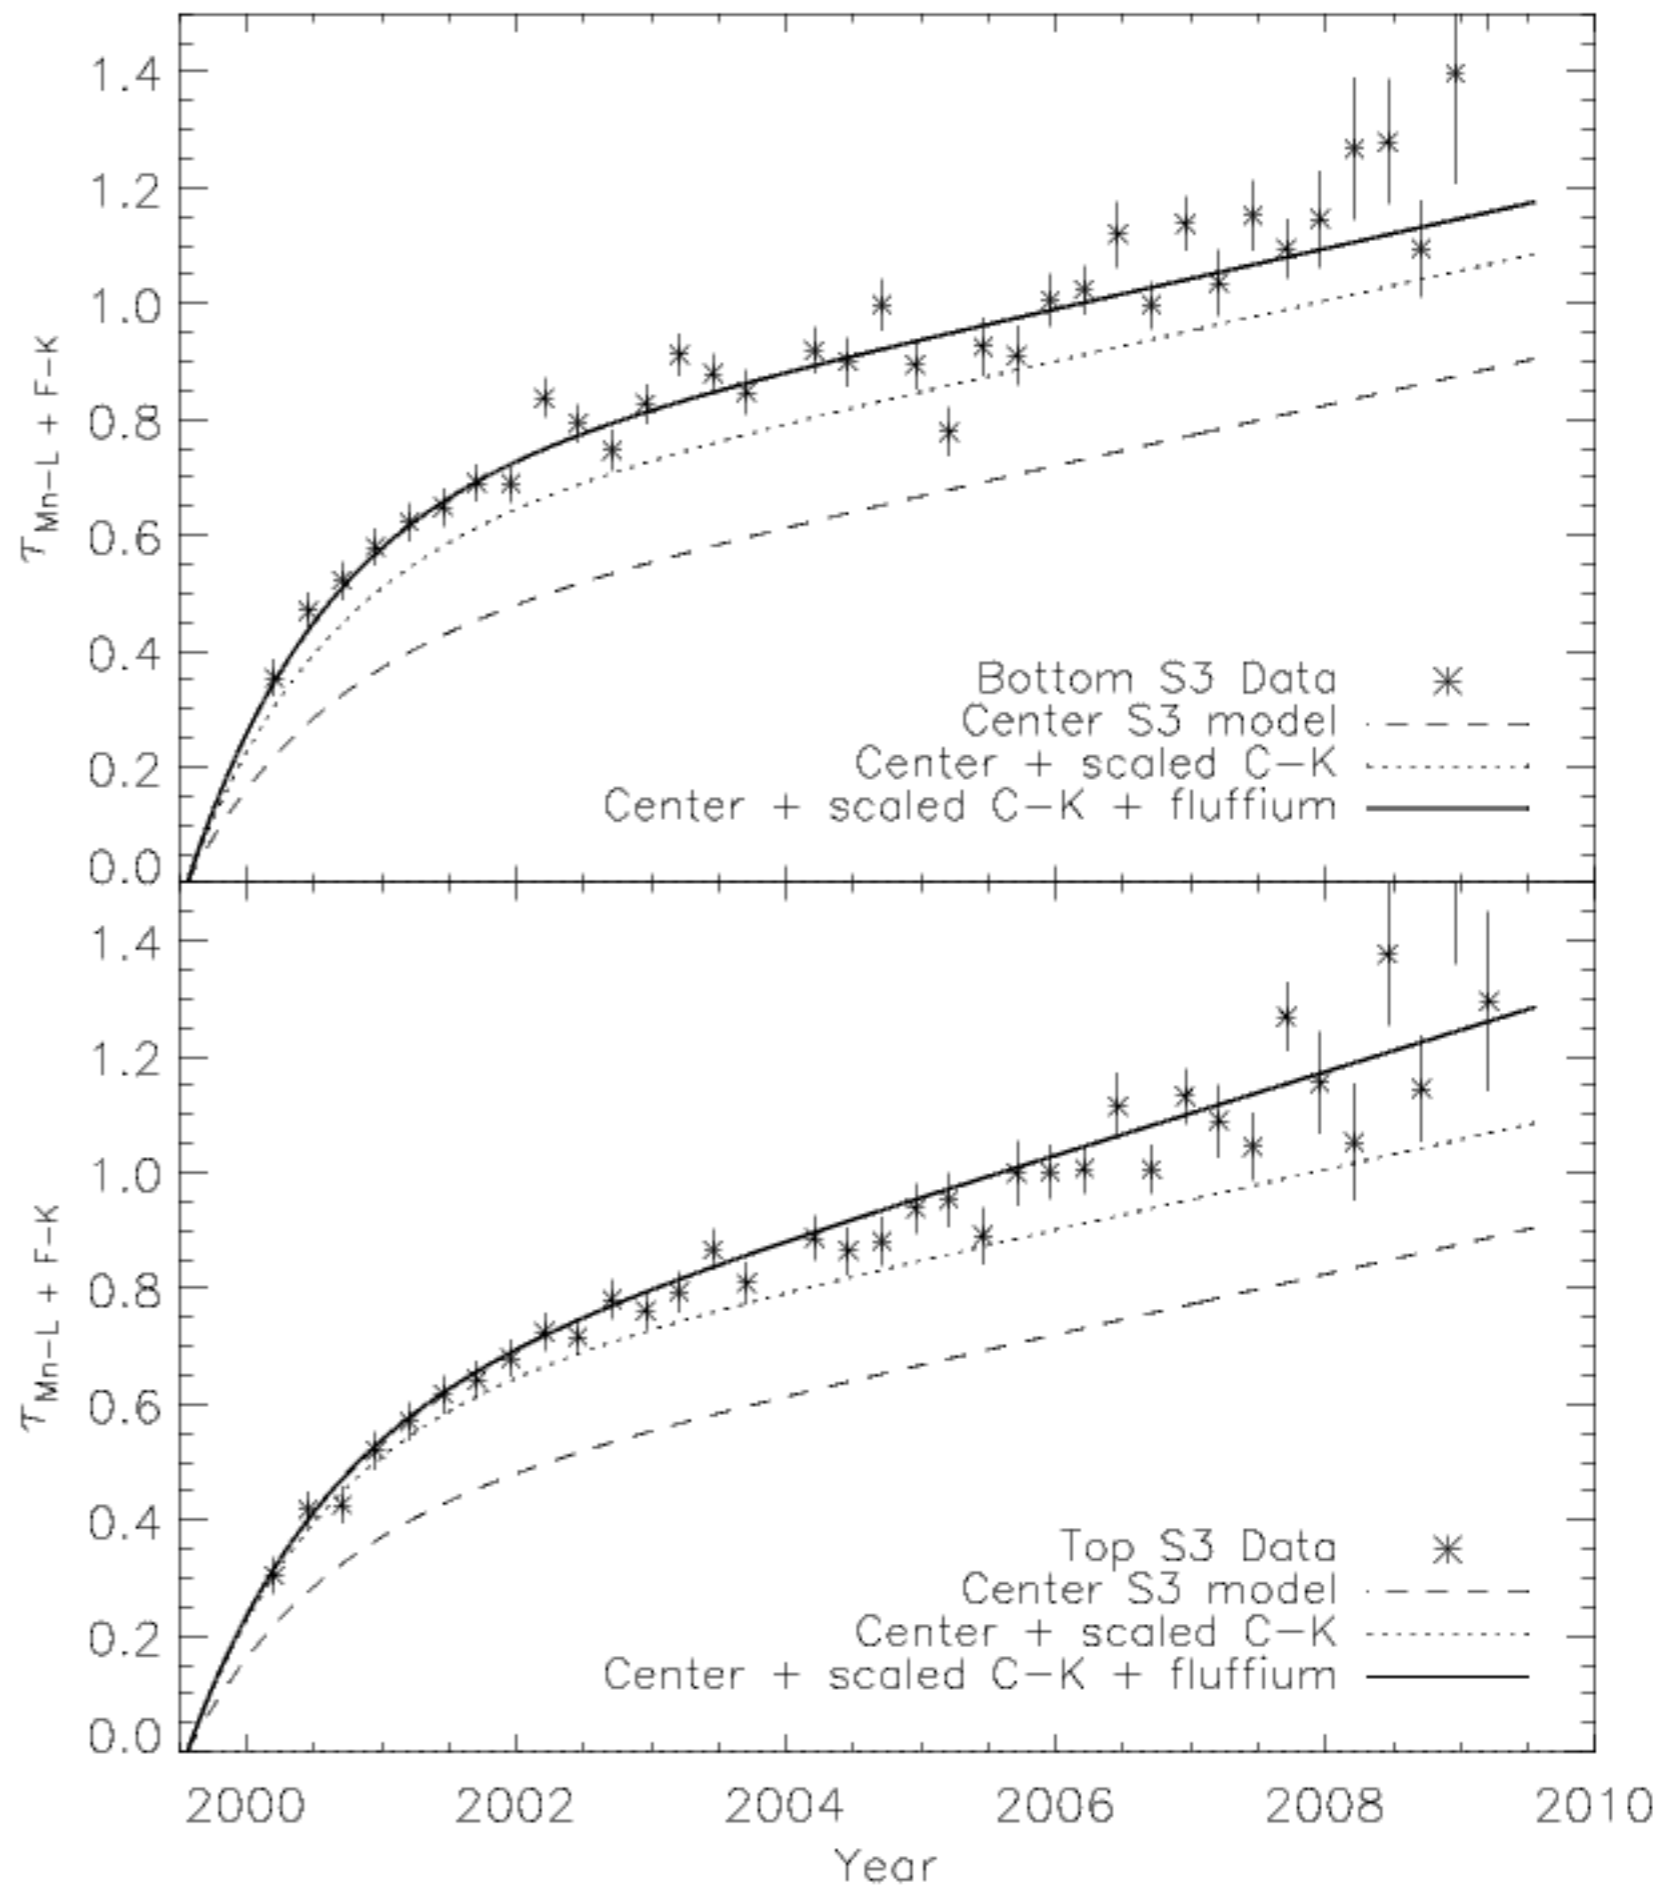

- Scale C-K model to 660 eV
- Subtract from CS data
- Fit to rising exponential
- Assign difference to fluffium

- Offset from center of S array
- Scale from C-K edge-center model
- Assign remainder to fluffium
- Fluffium now has spatial-temporal model

- Predict Al-K optical depths
- One free parameter:  $\tau_{\text{Al-K, fluff}}$
- Error bars set at 0.05

# Testing I

ECS Residuals from model 9989, Mn-L + F-K data

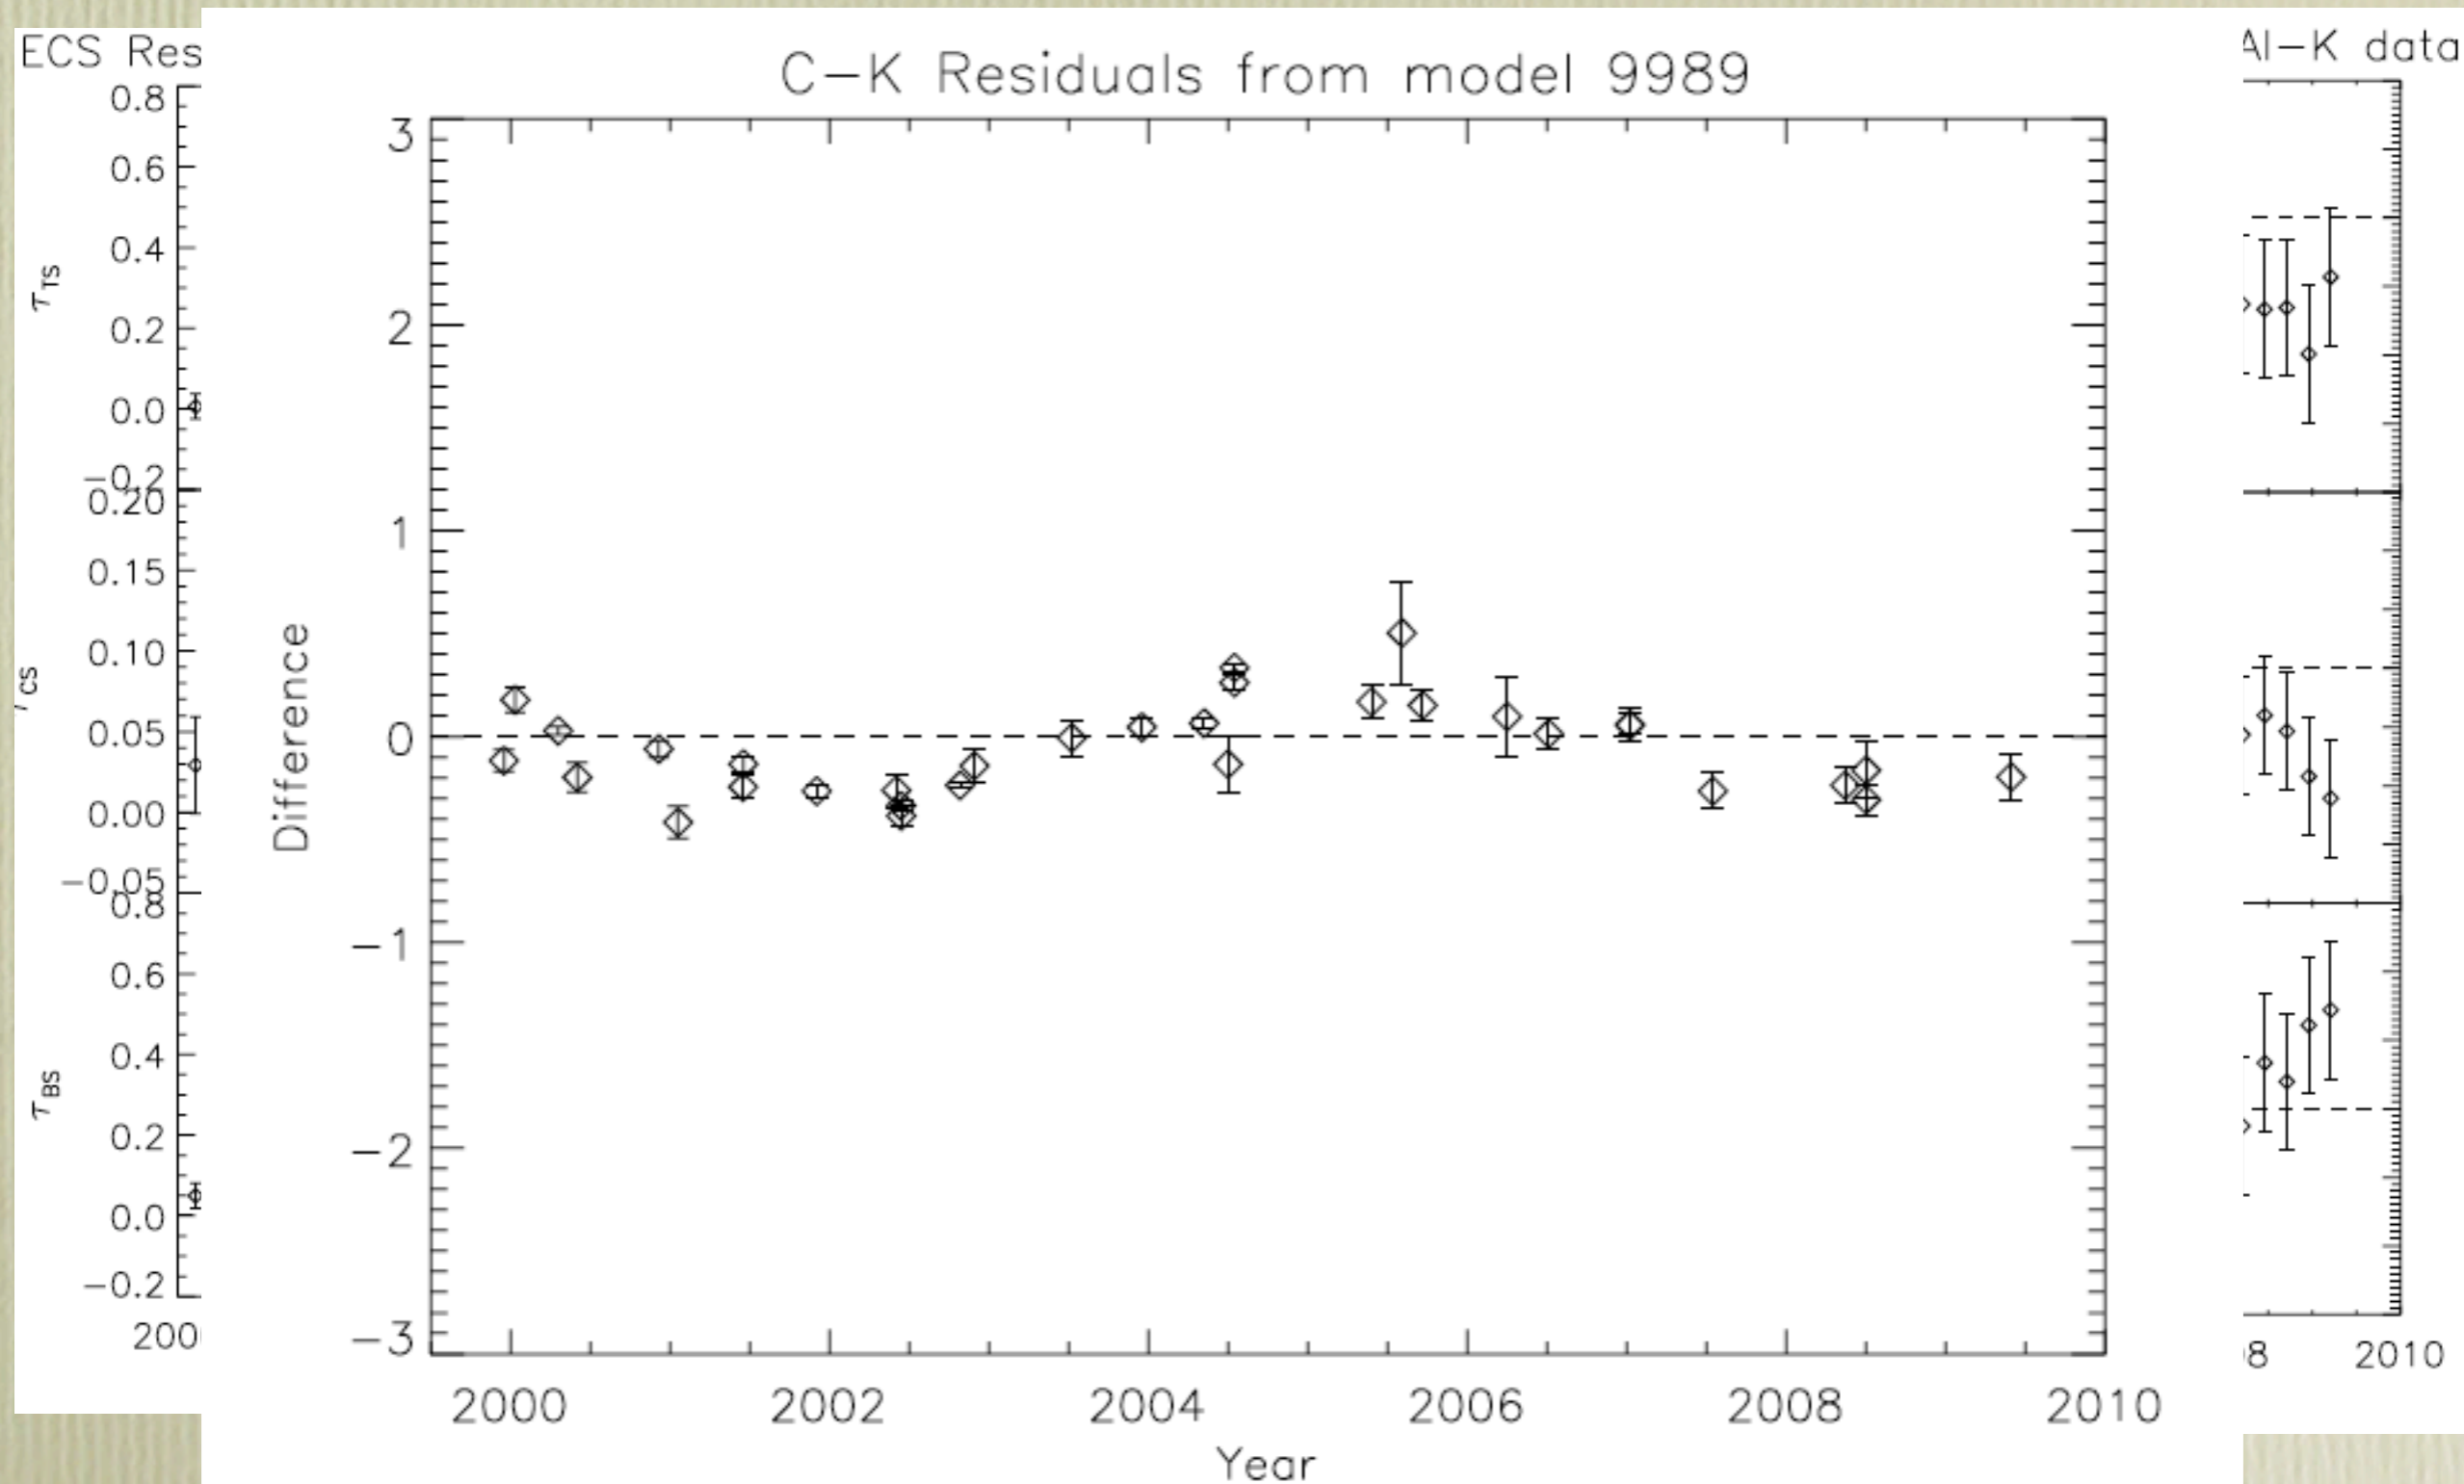

ECS Residuals from model 9989, Al-K data

# Testing I

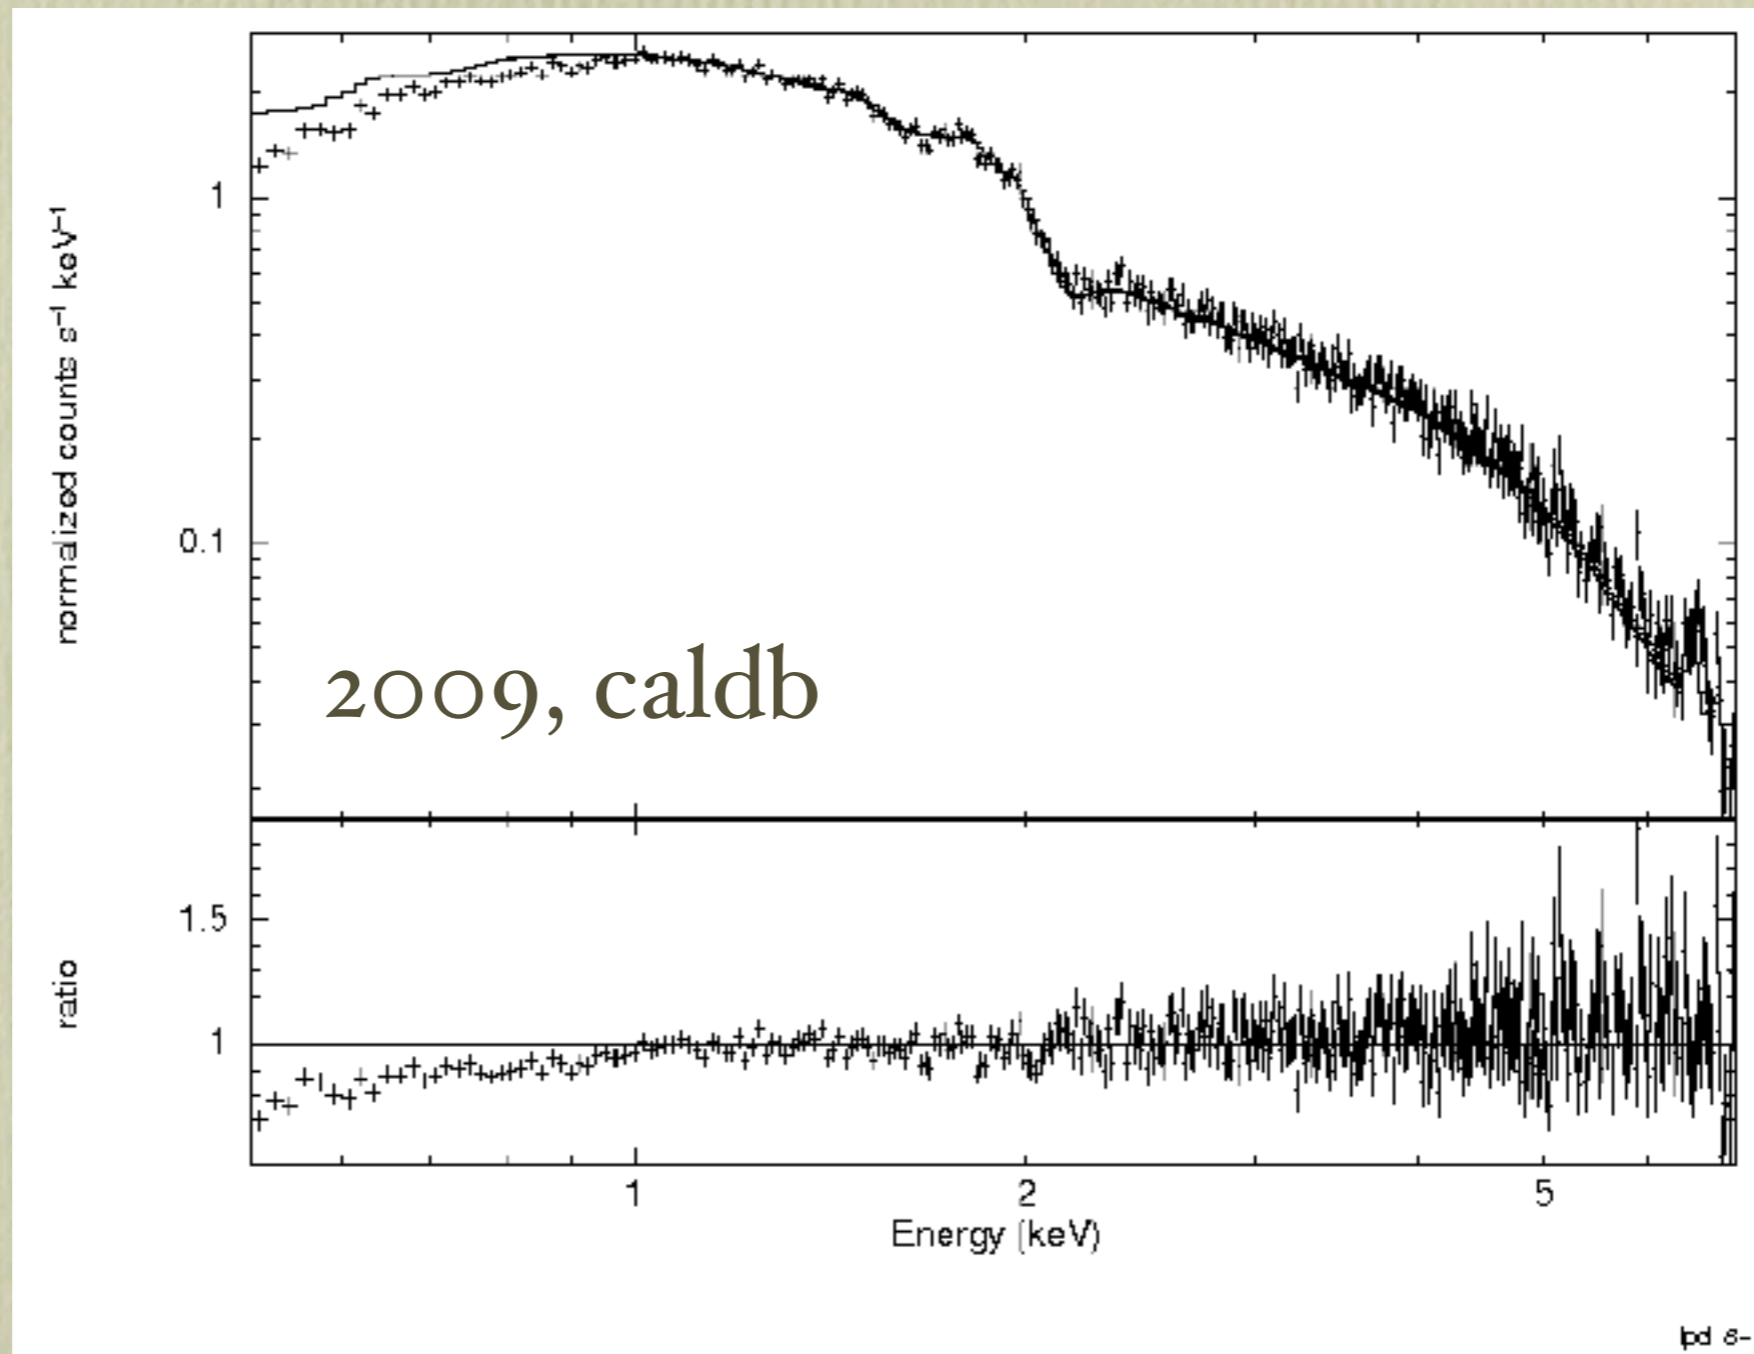

# Testing II

ACIS observations of Coma (Larry David)

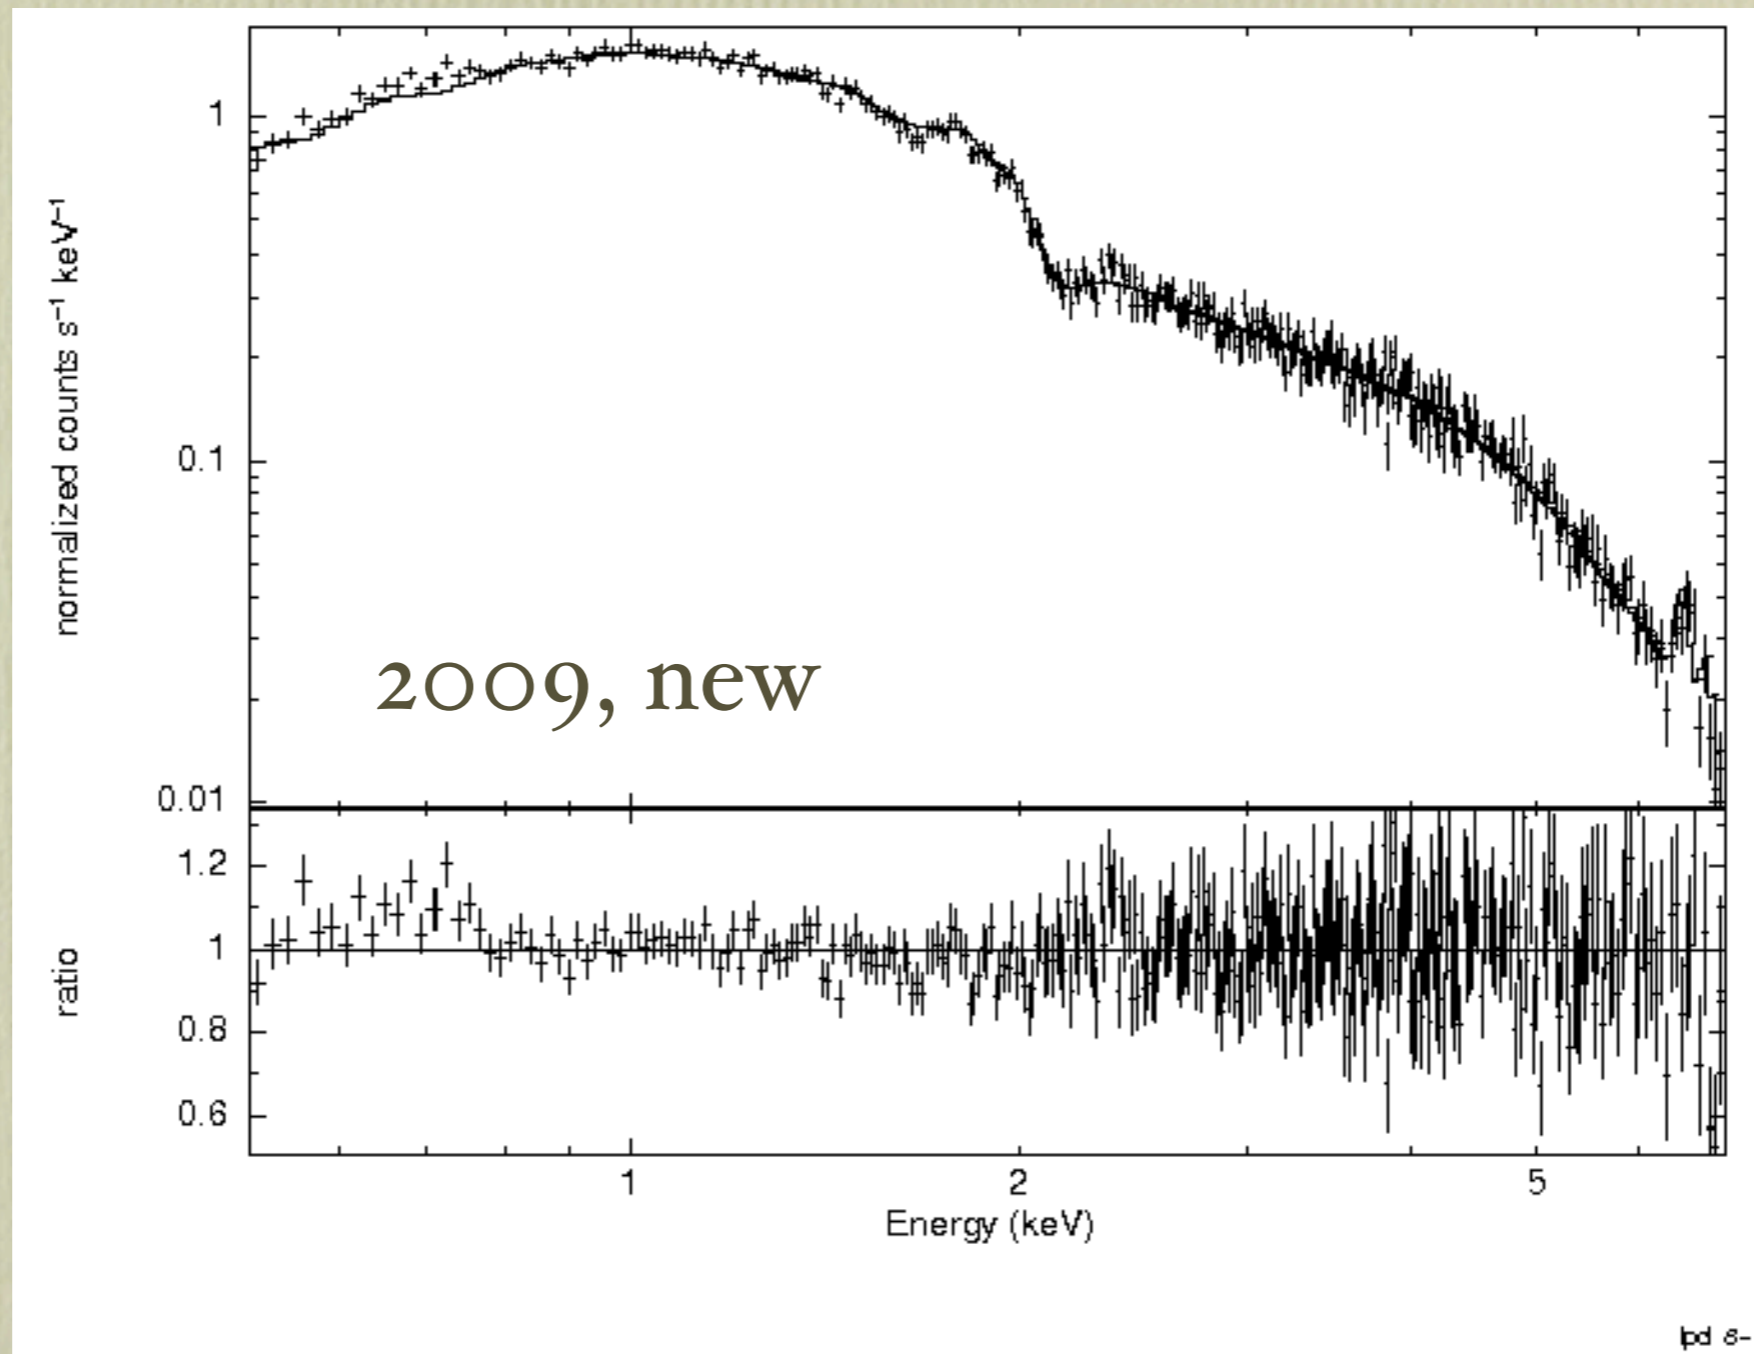

# Testing II

# Testing IV

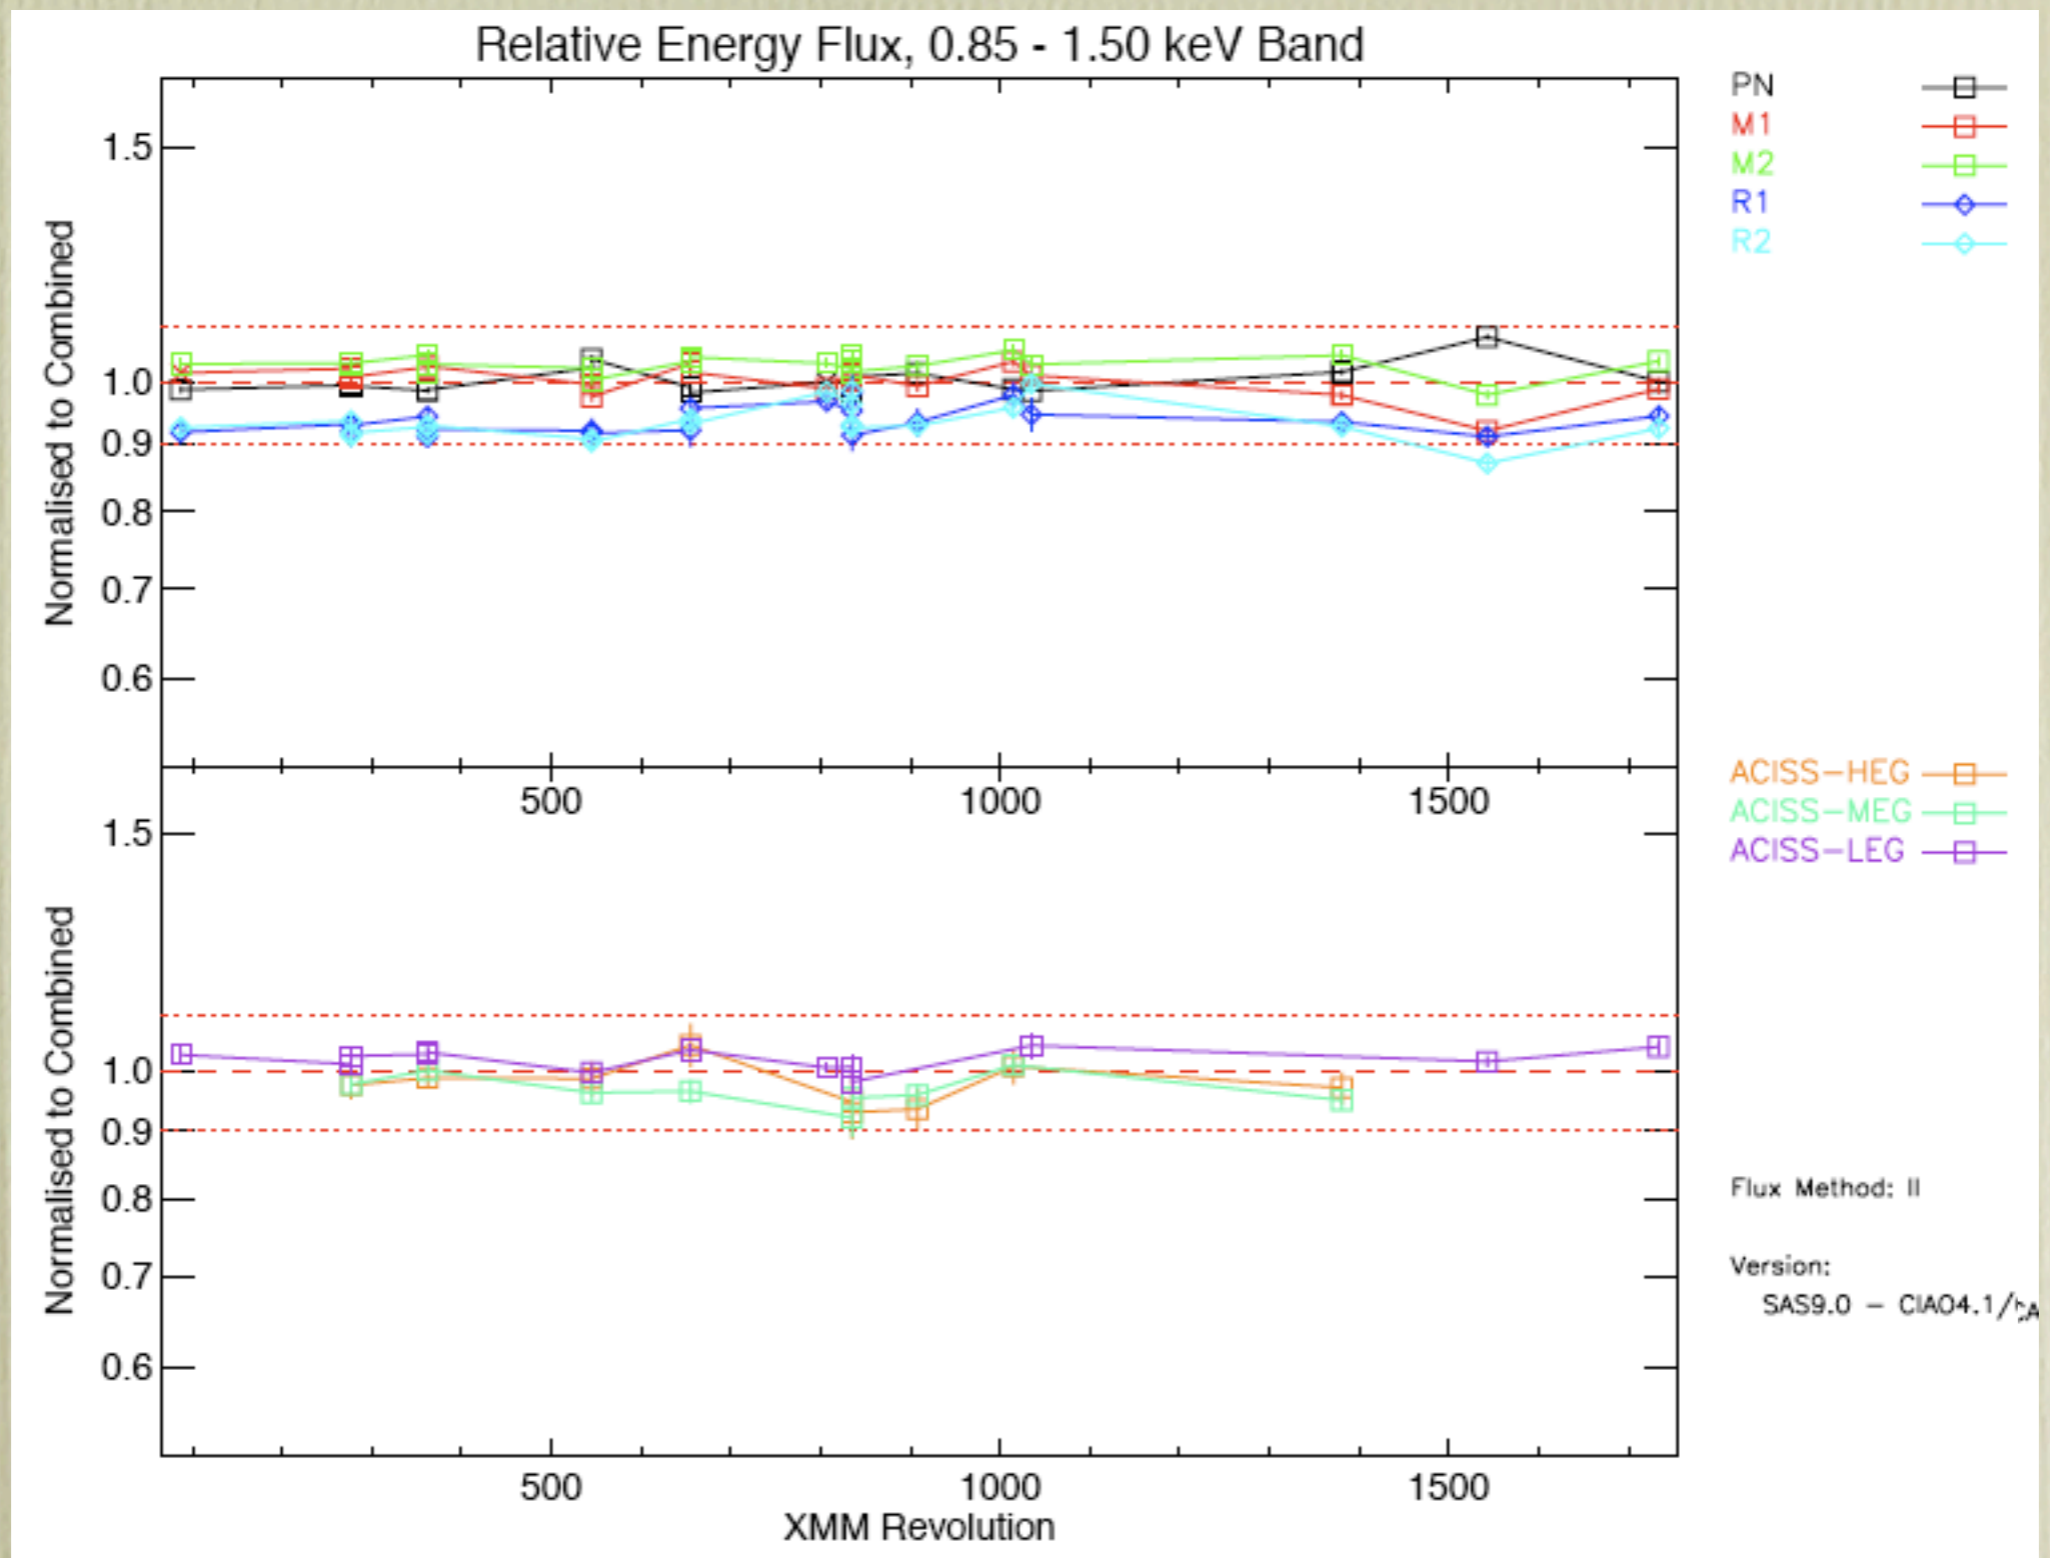

# Testing IV

# Testing IV

# Summary

- A new contamination correction will soon be available
  - Still testing on flight data
  - An alternative model from AV is being tested
- Fluffium component is not understood
  - Physical basis is untenable
  - Approach breaks down if ECS A1-K data are reliable
  - Alternative models will be explored
