

AHELP for CIAO 3.4

__uninitialize

Context: [slangrtl](#)

Jump to: [Description](#) [Example](#) [See Also](#)

Synopsis

Uninitialize a variable

Syntax

```
__uninitialize (Ref_Type x)
```

Description

The __uninitialize function may be used to uninitialize the variable referenced by the parameter x.

Example

The following two lines are equivalent:

```
( ) = __tmp(z);  
__uninitialize (&z);
```
