`_trace_function`

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Set the function to trace

Syntax

```
_trace_function (String_Type f)
```

Description

`_trace_function` declares that the S-Lang function with name `f` is to be traced when it is called. Calling `_trace_function` does not in itself turn tracing on. Tracing is turned on only when the variable `_slangtrace` is non-zero.
