

*AHELP for CIAO 3.4*

array_info

Context: [slangrtl](#)*Jump to:* [Description](#) [Example](#) [See Also](#)

Synopsis

Returns information about an array

Syntax

```
(Array_Type, Integer_Type, DataType_Type) array_info (Array_Type a)
```

Description

The `array_info` function returns information about the array `a`. It returns three values: an 1–d integer array specifying the size of each dimension of `a`, the number of dimensions of `a`, and the data type of `a`.

Example

The `array_info` function may be used to find the number of rows of an array:

```
define num_rows (a)
{
  variable dims, num_dims, data_type;

  (dims, num_dims, data_type) = array_info (a);
  return dims [0];
}
```

For 1–d arrays, this information is more easily obtained from the `length` function.
