

AHELP for CIAO 3.4

define_case

Context: [slangrtl](#)*Jump to: [Description](#) [See Also](#)*

Synopsis

Define upper–lower case conversion.

Syntax

```
define_case (Integer_Type ch_up, Integer_Type ch_low);
```

Description

This function defines an upper and lowercase relationship between two characters specified by the arguments. This relationship is used by routines which perform uppercase and lowercase conversions. The first integer `ch_up` is the ascii value of the uppercase character and the second parameter `ch_low` is the ascii value of its lowercase counterpart.
