

AHELP for CIAO 3.4

ftell

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Obtain the current position in an open stream

Syntax

```
Integer_Type ftell (File_Type fp)
```

Description

The `ftell` function may be used to obtain the current position in the stream associated with the open file pointer `fp`. It returns the position of the pointer measured in bytes from the beginning of the file. Upon error, it returns `-1` and sets `errno`.
