

AHELP for CIAO 3.4

getcwd

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Get the current working directory

Syntax

```
String_Type getcwd ( )
```

Description

The `getcwd` function returns the absolute pathname of the current working directory. If an error occurs or it cannot determine the working directory, it returns `NULL` and sets `errno` accordingly.

Under Unix, OS/2, and MSDOS, the pathname returned by this function includes the trailing slash character. Some versions also include the drive specifier.
