length

Context: [slangrtl](#)*Jump to:* [Description](#) [See Also](#)

Synopsis

Get the length of an object

Syntax

```
Integer_Type length (obj)
```

Description

The length function may be used to get information about the length of an object. For simple scalar data-types, it returns 1. For arrays, it returns the total number of elements of the array.

If obj is a string, length returns 1 because a String_Type object is considered to be a scalar. To get the number of characters in a string, use the strlen function.
