

AHELP for CIAO 3.4

log10

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Compute the base-10 logarithm of a number

Syntax

```
y = log10 (x)
```

Description

The log10 function computes the base-10 logarithm of a number and returns the result as an array. If its argument is an array, the log10 function will be applied to each element and the result returned as an array.
