

AHELP for CIAO 3.4

path_basename

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Get the basename part of a pathname

Syntax

```
String_Type path_basename (String_Type path)
```

Description

The path_basename function returns the basename associated with the path parameter. The basename is the non-directory part of the filename, e.g., on unix c is the basename of /a/b/c.
