AHELP for CIAO 3.4

path_dirname

Context: slangrtl

Jump to: Description See Also

Synopsis

Get the directory name part of a pathname

Syntax

```
String_Type path_dirname (String_Type path)
```

Description

The path_dirname function returns the directory name associated with a specified pathname.

On systems that include a drive specifier as part of the pathname, the value returned by this function will include the driver specifier.
