

AHELP for CIAO 3.4

path_sans_extname

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Strip the extension from a pathname

Syntax

```
String_Type path_sans_extname (String_Type path)
```

Description

The `path_sans_extname` function removes the file name extension (including the dot) from the path and returns the result.
