AHELP for CIAO 3.4

set_import_module_path

Context: slangrtl

Jump to: Description See Also

Synopsis

Set the search path for dynamically loadable objects

Syntax

```
set_import_module_path (String_Type path_list)
```

Description

The set_import_module_path may be used to set the search path for dynamically shared objects. Such objects may be made accessable to the application via the import function.

The actual syntax for the specification of the set of paths will vary according to the operating system. Under Unix, a colon character is used to separate paths in path_list. For win32 systems a semi−colon is used.
