

*AHELP for CIAO 3.4*

ds9_get_crosshair

Context: [ds9](#)*Jump to:* [Description](#) [NOTES](#) [See Also](#)

Synopsis

Retrieve position of crosshair cursor

Syntax

```
(x, y) = ds9_get_crosshair()
(x, y) = ds9_get_crosshair( [ coord_sys, handle ] )
```

Description

Return the position of the crosshair cursor, under the same coordinate system and return-value constraints as those described for `ds9_get_coords`. (0,0) will be returned when the current frame is not displaying an image. (-1,-1) will be returned upon error (e.g. when no frames exist).

NOTES

When an image is loaded into a frame the crosshair cursor will be positioned at its center, even if the crosshair is invisible.
