str_delete_chars

Context: [slangrtl](#)*Jump to:* [Description](#) [Example](#)

Synopsis

Delete characters from a string

Syntax

```
String_Type str_delete_chars (String_Type str, String_Type del_set
```

Description

This function may be used to delete the set of characters specified by `del_set` from the string `str`. The result is returned.

Example

```
str = str_delete_chars (str, "^A-Za-z");
```

will remove all characters except A–Z and a–z from `str`.
