AHELP for CIAO 3.4

str_replace

Context: slangrtl

Jump to: Description See Also

Synopsis

Replace a substring of a string

Syntax

```
Integer_Type str_replace (String_Type a, String_Type b, String_Type c)
```

Description

The str_replace function replaces the first occurance of b in a with c and returns an integer that indicates whether a replacement was made or not. If b does not occur in a, zero is returned. However, if b occurs in a, a non−zero integer is returned as well as the new string resulting from the replacement.

This function has been superceded by strreplace.
