Synopsis

Synchrotron radiation from cutoff electron distribution. XSpec model.

Description

The synchrotron spectrum from an exponentially cut off power law distribution of electrons in a homogeneous magnetic field. This spectrum is itself a power law, rolling off more slowly than exponential in photon energies. Though more realistic than a power law, it is highly oversimplified, but does give the maximally curved physically plausible spectrum and can be used to set limits on maximum accelerated–electron energies even in remnants whose X–rays are thermal. See Reynolds, S.P. and Keohane, J.W. 1999, ApJ, 525, 368 and Reynolds, S.P., 1998 ApJ 493, 357. Note that the radio spectral index and flux can be obtained from Green's Catalogue of Galactic Supernova Remnants.

xssrcut Parameters

Number	Name	Description
1	alpha	radio spectral index
2	break	approximately the frequency at which the flux has dropped by a factor of 10 from a straight power law
3	norm	normalization, 1 GHz flux (Jy)

This information is taken from the XSpec User's Guide. Version 11.3.1 of the XSpec models is supplied with CIAO 3.2.

Bugs

For a list of known bugs and issues with the XSPEC models, please visit the XSPEC bugs page.
