

MDL: Model Descriptor List

A new CXC file format to store the results of fitting spectral models (e.g. from Sherpa), and to allow extensions to associated catalogs. The first application of MDL files is to interact with the [ATOMDB](#). Creates output files containing spectral line information.

The [GUIDE: Fitting and Identifying Spectral Lines](#) thread has an example of creating an MDL file.

The Chandra X-Ray Center (CXC) is operated for NASA by the Smithsonian Astrophysical Observatory.
60 Garden Street, Cambridge, MA 02138 USA.
