

Subspace / Data Subspace

A record of all filtering applied to a file (e.g. selection of a source region or a flaring interval) by the DM. Having this recorded in a data file header allows subsequent tools to extract appropriate calibration information. The subspace also helps users recall how a particular file has been filtered.

All tools that use the DM I/O library propagate the data subspace.

The Chandra X-Ray Center (CXC) is operated for NASA by the Smithsonian Astrophysical Observatory.
